XX	
CC AAI73060 to AAI79867 represent isolated human polymorphic polynucleotide sequences (I), which contain single nucleotide polymorphisms (SNPs).	
CC	
CC AAM53114 to AAM53329 represent peptides related to human polymorphic polynucleotide sequences. The sequences can be used in gene and protein therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of polymorphic polypeptides. For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the patient's own production of polypeptide. Additionally, (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The polypeptides encoded by (I) may be used as antigens in the production of antibodies specific for polymorphic polypeptides. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of polymorphic polypeptides in samples

PT Generating a siRNA expression library for selective post-transcriptional
PT silencing of genes encoding a family of proteins comprises identifying a
XX consensus sequence for protein families.
XX
PS Example 2; SEQ ID NO 217; 44pp; English.
XX
CC The invention relates to a method for generating a siRNA expression
CC library for selective post-transcriptional silencing of genes encoding a
CC family of proteins comprising identifying a consensus sequence for the
CC family of proteins. The method comprises: (a) identifying a consensus
CC sequence for the family of proteins; and (b) generating an siRNA
CC expression library whose members encode siRNA molecules that target at
CC least all mRNA encoding all known members of the family of proteins. The
CC tyrosine kinases, non-receptor tyrosine kinases, nuclear hormone
CC receptors, GTPases, ATPases, serine/threonine kinases, proteases, matrix
CC metalloproteinases, GTPase-activating proteins or E3 ubiquitin ligases.
CC Identifying a consensus sequence comprises identifying at least one, two
CC or more signature motif for the family of proteins. The method is useful
CC for generating a siRNA expression library for selective post-
CC transcriptional silencing of genes encoding a family of proteins. The
CC library is useful for identifying genes involved in disease processes.
CC This sequence corresponds to an oligonucleotide used in the method of the
CC invention.

 XX XX New soluble polypeptides comprising an extracellular domain of EphB4 or
 PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
 PT associated diseases, such as inflammatory disorders, psoriasis or
 PT scleroderma.
 XX PS Example 1; Page 44; 198pp; English.
 XX CC The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumour; methods for
 CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a primer used in the isolation of human ephrin B4 cDNA used in
 CC the creation of an expression vector for producing a soluble Eph B4
 CC derivative.

 XX XX New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
 PT transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
 PT useful for diagnosing or treating cancer or angiogenesis-associated
 PT diseases.
 XX PS Example 1; Page 49; 206pp; English.
 XX CC The invention relates to an isolated nucleic acid compound comprising at
 CC least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
 CC physiological conditions and decreases the expression of EphB4 or
 CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
 CC medicament for the treatment of cancer or angiogenesis-associated
 CC diseases. The composition and methods are useful for diagnosing or
 CC treating cancer or angiogenesis-associated diseases, such as inflammatory
 CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
 CC diseases or scleroderma. The present sequence represents a human EphB4
 CC PCR primer.

 PT Determining whether a test compound inhibits tyrosine kinase activity in
 PT a mammal by exposing the mammal to the test compound and measuring in the
 PT mammal the level of at least one of the measured proteins or mRNA
 PT transcripts.
 XX
 XX Example K; SEQ ID NO 40; 408pp; English.
 XX
 XX The invention relates to a novel method for determining whether a test
 CC compound inhibits tyrosine kinase activity in a mammal comprising
 CC measuring in the mammal the level of at least one of the proteins and/or
 CC mRNA transcripts or genes for such proteins comprising type 1 plasminogen
 CC activator inhibitor (PAI-1), TIMP-1 (tissue inhibitor of
 CC metalloproteinase 1), vinculin, vascular endothelial growth factor
 CC (VEGF), placental growth factor (PLGF), VEGF/PLGF heterodimers or
 CC migration inhibitory factor (MIG), exposing the mammal to the test
 CC compound and then measuring in the mammal the level of at least one of
 CC the proteins and/or mRNA transcripts previously measured. The method of
 CC the invention may be useful for determining whether a test compound
 CC inhibits tyrosine kinase activity in a mammal. The current sequence is
 CC that of the PCR primer which was used in the exemplification of the
 CC invention.

CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 siRNA that can be used to control EphB4
CC expression.

 CC The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumour; methods for
 CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a human ephrin B4 siRNA that can be used to control EphB4
 CC expression.

 XX
 PS Example 8; Page 94; 198pp; English.
 CC The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumour; methods for
 CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,

CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a human ephrin B4 antisense oligonucleotide that can be used
 CC to control EphB4 expression.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or

PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-

PT associated diseases, such as inflammatory disorders, psoriasis or

PT scleroderma.

PS Example 8; Page 96; 198pp; English.

XX The invention describes an isolated soluble polypeptide comprising an

CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2

CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4

CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the

CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also

CC described are: an antagonist antibody that binds to an extracellular

CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the

CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a

CC diagnostic kit, comprising the above soluble polypeptide or antagonist

CC antibody, and a pharmaceutical carrier; methods of inhibiting

CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a

CC cell; a method of reducing the growth rate of a tumour; methods for

CC treating a patient suffering from a cancer or an angiogenesis-associated

CC disease; and a method for identifying a tumor that is suitable for

CC antibody with an EphrinB2 or EphB4 antagonist. The polypeptide or

CC are useful for diagnosing or treating cancer or angiogenesis-associated

CC cancer or an angiogenesis-associated disease. The composition and methods

CC are useful for diagnosing or treating cancer or angiogenesis-associated

CC diseases, such as inflammatory disorders, chronic articular rheumatism,

CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence

CC represents a human ephrin B4 siRNA that can be used to control EphB4

CC expression.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or
XX Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
XX associated diseases, such as inflammatory disorders, psoriasis or
XX scleroderma.
XX Example 8; Page 95; 198pp; English.
XX The invention describes an isolated soluble polypeptide comprising an
XX amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
XX protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
XX polypeptide binds specifically to the Ephrin B2 polypeptide, and the
XX Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
XX described are: an antagonist antibody that binds to an extracellular
XX domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
XX EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
XX diagnostic kit, comprising the above soluble polypeptide or antagonist
XX antibody, and a pharmaceutical carrier; methods of inhibiting
XX angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
XX cell; a method of reducing the growth rate of a tumor; methods for
XX treating a patient suffering from a cancer or an angiogenesis-associated
XX disease; and a method for identifying a tumor that is suitable for
XX treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
XX antibody is useful for manufacturing a medicament for the treatment of
XX cancer or an angiogenesis-associated disease. The composition and methods
XX are useful for diagnosing or treating cancer or angiogenesis-associated
XX diseases, such as inflammatory disorders, chronic articular rheumatism,
XX psoriasis, ocular angiogenic diseases or scleroderma. This sequence
XX represents a human ephrin B4 siRNA that can be used to control EphB4
XX expression.

XX PT New soluble polypeptides comprising an extracellular domain of EphB4 or
PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT associated diseases, such as inflammatory disorders, psoriasis or
PT scleroderma.
XX PS Example 8; Page 95; 198pp; English.
XX CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 siRNA that can be used to control EphB4
CC expression.

XX
CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

 CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or

CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a human ephrin B4 antisense oligonucleotide that can be used
 CC to control EphB4 expression.

 XX DR New soluble polypeptides comprising an extracellular domain of EphB4 or
 PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
 PT associated diseases, such as inflammatory disorders, psoriasis or
 PT scleroderma.
 XX FS Example 8; Page 95; 198pp; English.
 XX CC The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC described are: a pharmaceutical or cosmetic composition, or a
 CC antibody, and a pharmaceutical carrier, methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumour; methods for

CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 siRNA that can be used to control EphB4
CC expression.

 CC least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
 CC physiological conditions and decreases the expression of EphB4 or
 CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
 CC medicament for the treatment of cancer or angiogenesis-associated
 CC diseases. The composition and methods are useful for diagnosing or
 CC treating cancer or angiogenesis-associated diseases, such as inflammatory
 CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
 CC diseases or scleroderma. The present sequence represents a human EphB4
 CC antisense RNAi probe.

PT New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT useful for diagnosing or treating cancer or angiogenesis-associated
PT diseases.
XX
XX Example 8; Page 103; 206pp; English.
XX
CC The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense RNAi probe.

XX New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2 transcripts or decrease the expression of EphB4 or EphrinB2 in cells, useful for diagnosing or treating cancer or angiogenesis-associated diseases.
XX
XX Example 8; Page 98; 206pp; English.
XX The invention relates to an isolated nucleic acid compound comprising at least a portion that hybridizes to an EphB4 or EphrinB2 transcript under physiological conditions and decreases the expression of EphB4 or EphrinB2 in a cell. The nucleic acid is useful for manufacturing a medicament for the treatment of cancer or angiogenesis-associated diseases. The composition and methods are useful for diagnosing or treating cancer or angiogenesis-associated diseases, such as inflammatory disorders, chronic articular rheumatism, psoriasis, ocular angiogenic diseases or scleroderma. The present sequence represents a human EphB4 antisense probe.

 XX Inhibiting one or more skeletal related events such as bone fracture, spinal cord compression, bone surgery, bone metastasis or hypercalcemia of malignancy in cancer patient, involves administering EphA2 inhibitors to patient.
 XX Example 10; SEQ ID NO 77; 115pp; English.
 XX The present invention relates to metastasis of cancer to bone,

CC identifying molecules that play a role in skeletal related events (SRES)
CC and metastasis, identifying modulators of skeletal related events and
CC metastasis, and inhibiting one or more SRES in a patient. Determining the
CC susceptibility of a cancer patient to one or more SRES comprises
CC detecting evidence of Erythropoietin-producing hepatocellular A2 receptor
CC tyrosine kinase (EphA2) expression in a patient's cancer sample. Evidence
CC of EphA2 expression is indicative of the patient's susceptibility to one
CC or more SRES. The cancer prostate, breast or colon cancer. Inhibiting
CC SRES comprises administering one or more EphA2 inhibitors to the patient.
CC One inhibitor is an antibody that binds EphA2, where the antibody
CC inhibits bone SRES in a patient having bone metastasis, or the antibody
CC is identified by testing for its effectiveness for treating metastasis in
CC bone. The antibody binds at least one region of the EphA2 sequence, and
CC the regions are chosen from 60 sequences given in the specification. The
CC EphA2 inhibitor can also be an oligonucleotide, small molecule, mimetic,
CC or decoy. The methods are useful for determining the susceptibility of a
CC cancer patient to one or more SRES chosen from bone fracture, radiation
CC for bone pain or fracture prevention or treatment, spinal cord
CC compression, bone surgery, bone metastasis or hypercalcemia of
CC malignancy. The methods are useful for ameliorating symptoms of a
CC metastasis to bone in a cancer patient, inhibiting interactions of a
CC cancer cell and a host cell, inhibiting anchorage-dependent cell growth,
CC and inhibiting migration of cancer cell or inhibiting adhesion of cancer
CC cell. The symptoms of metastasis to bone is chosen from pain and bone
CC fractures. The present sequence is antisense oligonucleotide #7 specific
CC for human EphA2.

PT New soluble polypeptides comprising an extracellular domain of EphB4 or

PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT associated diseases, such as inflammatory disorders, psoriasis or
PT scleroderma.

XX Example 6; Page 86; 198pp; English.

PS The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a primer used in the isolation of human ephrin B4 CDNA.

PT New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2

transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
 useful for diagnosing or treating cancer or angiogenesis-associated
 diseases.

Example 6; Page 93; 206pp; English.

The invention relates to an isolated nucleic acid compound comprising at
 least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
 physiological conditions and decreases the expression of EphB4 or
 EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
 medicament for the treatment of cancer or angiogenesis-associated
 diseases. The composition and methods are useful for diagnosing or
 treating cancer or angiogenesis-associated diseases, such as inflammatory
 disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
 diseases or scleroderma. The present sequence represents a human EphB4
 reverse transcriptase (RT)-PCR primer.

 XX A new polypeptide has a discoidin-type ligand binding domain and a
 tyrosine kinase domain and is useful to diagnose and treat a patient
 having tumors of epithelial type cells which express the polypeptide on
 their surface.

Example 1; SEQ ID NO 3; 27pp; English.

The invention relates to a composition comprising a polypeptide having a
 first domain with carbohydrate binding activity and a second domain with
 kinase activity, a first domain with discoidin-type ligand binding
 characteristics and a second domain with tyrosine kinase activity. The
 invention is useful to diagnose, prognose and treat a patient having
 tumours of epithelial type cells which express the polypeptide on their
 surface. The present sequence represents a tyrosine kinase antisense

CC oligonucleotide.

 scleroderma.

Example 3; Page 62; 198pp; English.

The invention describes an isolated soluble polypeptide comprising an
 amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 described are: an antagonist antibody that binds to an extracellular
 domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 diagnostic kit, comprising the above soluble polypeptide or antagonist
 antibody, and a pharmaceutical carrier; methods of inhibiting
 angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 cell; a method of reducing the growth rate of a tumour; methods for
 treating a patient suffering from a cancer or an angiogenesis-associated
 disease; and a method for identifying a tumor that is suitable for
 treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 antibody is useful for manufacturing a medicament for the treatment of
 cancer or an angiogenesis-associated disease. The composition and methods
 are useful for diagnosing or treating cancer or angiogenesis-associated

CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

XX
CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumor; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

PS The invention describes an isolated soluble polypeptide comprising an

CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2

CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4

CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the

CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also

CC described are: an antagonist antibody that binds to an extracellular

CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the

CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a

CC diagnostic kit, comprising the above soluble polypeptide or antagonist

CC antibody, and a pharmaceutical carrier; methods of inhibiting

CC cell; a method of reducing the growth rate of a tumour; methods for

CC treating a patient suffering from a cancer or an angiogenesis-associated

CC disease; and a method for identifying a tumor that is suitable for

CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or

CC antibody is useful for manufacturing a medicament for the treatment of

CC cancer or an angiogenesis-associated disease. The composition and methods

CC are useful for diagnosing or treating cancer or angiogenesis-associated

CC diseases, such as inflammatory disorders, chronic articular rheumatism,

CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence

DR New soluble polypeptides comprising an extracellular domain of EphB4 or

XX Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-

PT associated diseases, such as inflammatory disorders, psoriasis or

PT scleroderma.

XX Example 8; Page 92; 198pp; English.

PS The invention describes an isolated soluble polypeptide comprising an

CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2

CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4

CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the

CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also

CC described are: an antagonist antibody that binds to an extracellular

CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the

CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a

CC diagnostic kit, comprising the above soluble polypeptide or antagonist

CC antibody, and a pharmaceutical carrier; methods of inhibiting

CC cell; a method of reducing the growth rate of a tumour; methods for

CC treating a patient suffering from a cancer or an angiogenesis-associated

CC disease; and a method for identifying a tumor that is suitable for

CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or

CC antibody is useful for manufacturing a medicament for the treatment of

CC cancer or an angiogenesis-associated disease. The composition and methods

CC are useful for diagnosing or treating cancer or angiogenesis-associated

CC diseases, such as inflammatory disorders, chronic articular rheumatism,

CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence

CC represents a human ephrin B4 antisense oligonucleotide that can be used

CC to control EphB4 expression.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or
 PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
 PT associated diseases, such as inflammatory disorders, psoriasis or
 PT scleroderma.

PS Example 8; Page 92; 198pp; English.

XX The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting

CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumor; methods for
 CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a human ephrin B4 antisense oligonucleotide that can be used
 CC to control EphB4 expression.

XX
XX The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or
 PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
 PT associated diseases, such as inflammatory disorders, psoriasis or
 PT scleroderma.

PS Example 8; Page 93; 198pp; English.

XX The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4

CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumour; methods for
 CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a human ephrin B4 antisense oligonucleotide that can be used
 CC to control EphB4 expression.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or
XX Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
XX associated diseases, such as inflammatory disorders, psoriasis or
XX scleroderma.
XX Example 8; Page 92; 198pp; English.
XX The invention describes an isolated soluble polypeptide comprising an
XX amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
XX protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
XX polypeptide binds specifically to the Ephrin B2 polypeptide, and the
XX Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
XX described are: an antagonist antibody that binds to an extracellular
XX domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
XX EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
XX diagnostic kit, comprising the above soluble polypeptide or antagonist
XX antibody, and a pharmaceutical carrier; methods of inhibiting
XX angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
XX cell; a method of reducing the growth rate of a tumour; methods for
XX treating a patient suffering from a cancer or an angiogenesis-associated
XX disease; and a method for identifying a tumor that is suitable for
XX treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
XX antibody is useful for manufacturing a medicament for the treatment of
XX cancer or an angiogenesis-associated disease. The composition and methods
XX are useful for diagnosing or treating cancer or angiogenesis-associated
XX diseases, such as inflammatory disorders, chronic articular rheumatism,
XX psoriasis, ocular angiogenic diseases or scleroderma. This sequence
XX represents a human ephrin B4 antisense oligonucleotide that can be used
XX to control EphB4 expression.

 CC The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumour; methods for
 CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a human ephrin B4 antisense oligonucleotide that can be used
 CC to control EphB4 expression.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or
 PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
 PT associated diseases, such as inflammatory disorders, psoriasis or
 PT scleroderma.

PS Example 8; Page 92; 198pp; English.

XX The invention describes an isolated soluble polypeptide comprising an

CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2

CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4

CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the

CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also

CC described are: an antagonist antibody that binds to an extracellular

CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the

CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a

CC diagnostic kit, comprising the above soluble polypeptide or antagonist

CC antibody, and a pharmaceutical carrier; methods of inhibiting

CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a

CC cell; a method of reducing the growth rate of a tumour; methods for

CC treating a patient suffering from a cancer or an angiogenesis-associated

CC disease; and a method for identifying a tumor that is suitable for

CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or

CC antibody is useful for manufacturing a medicament for the treatment of

CC cancer or an angiogenesis-associated disease. The composition and methods

CC are useful for diagnosing or treating cancer or angiogenesis-associated

CC diseases, such as inflammatory disorders, chronic articular rheumatism,

CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence

CC represents a human ephrin B4 antisense oligonucleotide that can be used

CC to control EphB4 expression.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or
PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT associated diseases, such as inflammatory disorders, psoriasis or
PT scleroderma.
PS Example 8; Page 93; 198pp; English.
CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
CC to control EphB4 expression.

PT New soluble polypeptides comprising an extracellular domain of EphB4 or
PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT associated diseases, such as inflammatory disorders, psoriasis or
PT scleroderma.
PS Example 8; Page 93; 198pp; English.
XX
CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods

CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a human ephrin B4 antisense oligonucleotide that can be used
 CC to control EphB4 expression.

CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 antisense oligonucleotide that can be used
XX to control EphB4 expression.

 CC The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumour; methods for
 CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods

CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a human ephrin B4 antisense oligonucleotide that can be used
 CC to control EphB4 expression.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or

PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-

PT associated diseases, such as inflammatory disorders, psoriasis or

PT scleroderma.

XX Example 8; Page 92; 198pp; English.

XX The invention describes an isolated soluble polypeptide comprising an

CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2

CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4

CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the

CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also

CC described are: an antagonist antibody that binds to an extracellular

CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the

CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a

CC diagnostic kit, comprising the above soluble polypeptide or antagonist

CC antibody, and a pharmaceutical carrier; methods of inhibiting

CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a

CC cell; a method of reducing the growth rate of a tumour; methods for

CC treating a patient suffering from a cancer or an angiogenesis-associated

CC disease; and a method for identifying a tumor that is suitable for

CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or

CC antibody is useful for manufacturing a medicament for the treatment of

CC cancer or an angiogenesis-associated disease. The composition and methods

CC are useful for diagnosing or treating cancer or angiogenesis-associated

CC diseases, such as inflammatory disorders, chronic articular rheumatism,

CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence

CC represents a human ephrin B4 antisense oligonucleotide that can be used

CC to control EphB4 expression.

 XX WPI; 2004-668883/65.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or
 XX Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
 XX associated diseases, such as inflammatory disorders, psoriasis or
 XX scleroderma.

XX Example 8; Page 92; 198pp; English.

XX The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumour; methods for
 CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a human ephrin B4 antisense oligonucleotide that can be used
 CC to control EphB4 expression.

 PS

XX The invention relates to an isolated nucleic acid compound comprising at
 CC least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
 CC physiological conditions and decreases the expression of EphB4 or
 CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
 CC medicament for the treatment of cancer or angiogenesis-associated
 CC diseases. The composition and methods are useful for diagnosing or
 CC treating cancer or angiogenesis-associated diseases, such as inflammatory
 CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
 CC diseases or scleroderma. The present sequence represents a human EphB4
 CC antisense probe.

XX New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2 transcripts or decrease the expression of EphB4 or EphrinB2 in cells, useful for diagnosing or treating cancer or angiogenesis-associated diseases.
XX
XX Example 8; Page 100; 206pp; English.
XX
XX The invention relates to an isolated nucleic acid compound comprising at least a portion that hybridizes to an EphB4 or EphrinB2 transcript under physiological conditions and decreases the expression of EphB4 or EphrinB2 in a cell. The nucleic acid is useful for manufacturing a medicament for the treatment of cancer or angiogenesis-associated diseases. The composition and methods are useful for diagnosing or treating cancer or angiogenesis-associated diseases, such as inflammatory disorders, chronic articular rheumatism, psoriasis, ocular angiogenic diseases or scleroderma. The present sequence represents a human EphB4 antisense probe.

XX
XX Example 8; Page 100; 206pp; English.
XX
XX The invention relates to an isolated nucleic acid compound comprising at least a portion that hybridizes to an EphB4 or EphrinB2 transcript under physiological conditions and decreases the expression of EphB4 or EphrinB2 in a cell. The nucleic acid is useful for manufacturing a medicament for the treatment of cancer or angiogenesis-associated diseases. The composition and methods are useful for diagnosing or treating cancer or angiogenesis-associated diseases, such as inflammatory disorders, chronic articular rheumatism, psoriasis, ocular angiogenic diseases or scleroderma. The present sequence represents a human EphB4 antisense probe.

XX New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2 transcripts or decrease the expression of EphB4 or EphrinB2 in cells, useful for diagnosing or treating cancer or angiogenesis-associated diseases.

XX Example 8; Page 99; 206pp; English.

XX The invention relates to an isolated nucleic acid compound comprising at least a portion that hybridizes to an EphB4 or EphrinB2 transcript under physiological conditions and decreases the expression of EphB4 or EphrinB2 in a cell. The nucleic acid is useful for manufacturing a medicament for the treatment of cancer or angiogenesis-associated diseases. The composition and methods are useful for diagnosing or treating cancer or angiogenesis-associated diseases, such as inflammatory disorders, chronic articular rheumatism, psoriasis, ocular angiogenic diseases or scleroderma. The present sequence represents a human EphB4 antisense probe.

PT New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT useful for diagnosing or treating cancer or angiogenesis-associated
PT diseases.

XX Example 8; Page 100; 206pp; English.

XX The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense probe.

XX
CC The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense probe.

 XX PF New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2 transcripts or decrease the expression of EphB4 or EphrinB2 in cells, useful for diagnosing or treating cancer or angiogenesis-associated diseases.

XX PS Example 8; Page 98; 206pp; English.

CC The invention relates to an isolated nucleic acid compound comprising at least a portion that hybridizes to an EphB4 or EphrinB2 transcript under physiological conditions and decreases the expression of EphB4 or EphrinB2 in a cell. The nucleic acid is useful for manufacturing a medicament for the treatment of cancer or angiogenesis-associated diseases. The composition and methods are useful for diagnosing or treating cancer or angiogenesis-associated diseases, such as inflammatory disorders, chronic articular rheumatism, psoriasis, ocular angiogenic diseases or scleroderma. The present sequence represents a human EphB4 antisense probe.

 XX Example 6; Page 93; 206pp; English.

CC The invention relates to an isolated nucleic acid compound comprising at
 CC least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
 CC physiological conditions and decreases the expression of EphB4 or
 CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
 CC medicament for the treatment of cancer or angiogenesis-associated
 CC diseases. The composition and methods are useful for diagnosing or
 CC treating cancer or angiogenesis-associated diseases, such as inflammatory
 CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
 CC diseases or scleroderma. The present sequence represents a human EphB4
 CC PCR primer.

XX
PS Example 8; Page 98; 206pp; English.
XX
SQ The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense probe.

PS
XX The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense probe.

New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2 transcripts or decrease the expression of EphB4 or EphrinB2 in cells, useful for diagnosing or treating cancer or angiogenesis-associated diseases.
 Example 8; Page 101; 206pp; English.
 The invention relates to an isolated nucleic acid compound comprising at least a portion that hybridizes to an EphB4 or EphrinB2 transcript under physiological conditions and decreases the expression of EphB4 or EphrinB2 in a cell. The nucleic acid is useful for manufacturing a medicament for the treatment of cancer or angiogenesis-associated diseases. The composition and methods are useful for diagnosing or treating cancer or angiogenesis-associated diseases, such as inflammatory disorders, chronic articular rheumatism, psoriasis, ocular angiogenic diseases or scleroderma. The present sequence represents a human EphB4 antisense probe.

 XX New soluble polypeptides comprising an extracellular domain of EphB4 or Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-associated diseases, such as inflammatory disorders, psoriasis or scleroderma.

Example 8; Page 96; 198pp; English.
 The invention describes an isolated soluble polypeptide comprising an amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2 protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4 polypeptide binds specifically to the Ephrin B2 polypeptide, and the Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also described are: an antagonist antibody that binds to an extracellular domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a diagnostic kit, comprising the above soluble polypeptide or antagonist antibody, and a pharmaceutical carrier; methods of inhibiting angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a cell; a method of reducing the growth rate of a tumour; methods for treating a patient suffering from a cancer or an angiogenesis-associated disease; and a method for identifying a tumor that is suitable for treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or antibody is useful for manufacturing a medicament for the treatment of cancer or an angiogenesis-associated disease. The composition and methods are useful for diagnosing or treating cancer or angiogenesis-associated diseases, such as inflammatory disorders, chronic articular rheumatism, psoriasis, ocular angiogenic diseases or scleroderma. This sequence represents a human ephrin B4 siRNA that can be used to control EphB4 expression.

CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 siRNA that can be used to control EphB4
CC expression.

 Novel polynucleotide of molecular variants of Cytochrome P450 2D6
 (CYP2D6) gene, capable of hybridizing to CYP2D6 gene, is useful in
 diagnosing disease related to presence of molecular variant of CYP2D6
 gene.
 Example 1; SEQ ID NO 16; 33pp; English.
 The invention relates to a polynucleotide (I) of molecular variants of
 CYP2D6 gene, chosen from polynucleotide capable of hybridizing to CYP2D6
 gene, where the polynucleotide consists of substitution of one or more
 nucleotides at position corresponding to 4784, 4735 or 4087 of the CYP2D6
 gene having a fully defined sequence (S1) of 9609 base pairs as given in
 the specification. (I) is useful for identifying a diagnostic
 composition, which involves (a) isolating (I) from several subgroups of
 individuals, where one subgroup has no prevalence for CYP2D6 associated
 disease, and one or more further subgroup(s) do have prevalence for a
 CYP2D6 associated disease, and (b) identifying a single nucleotide
 polymorphism by comparing the nucleic acid sequence of the polynucleotide
 or the gene of one subgroup having no prevalence for a CYP2D6 associated
 disease, with one or more further subgroup(s) having a prevalence for a
 CYP2D6 associated disease. (I) is useful for diagnosing a disease related
 to the presence of a molecular variant of a CYP2D6 gene or susceptibility
 to such a disorder, which involves determining the presence of (I) in a
 sample from a subject. (I) is useful for diagnosing whether a subject has
 EM, IM or PM phenotype, and for determining whether an individual is at
 risk for a toxic reaction, non-response, insufficient response, or
 reduced metabolic activity of CYP2D6 to treatment with a CYP2D6
 substrate. (I) is useful in selecting a subject suffering from a CYP2D6
 substrate treatable disease for treatment with the substrate, and in
 treating a subject suffering from a CYP2D6 substrate treatable disease.
 (I) is useful for detecting variant polynucleotide of CYP2D6 gene in a
 sample, which involves contacting (I) with the sample under conditions
 allowing interaction of variant of CYP2D6 gene with several immobilized
 targets on (I), and determining the binding of the polynucleotide or the
 gene to the immobilized targets on (I). (I) is useful for diagnosing a
 disease, which involves binding of the variant polynucleotide of CYP2D6
 gene or the gene to the immobilized targets on (I), where the binding
 indicates the presence or the absence of the disease or a prevalence for
 the disease. The disease is codeine dependence, depression, hepatitis C,
 psychosis, schizophrenia or Parkinson's disease. (I) is useful for
 diagnosing an altered activity of the CYP2D6 enzyme, and for diagnosing a
 polynucleotide associated with IM phenotype of CYP2D6. (I) is useful in
 diagnosing individual's genetic constitution of the CYP2D6 status, useful
 in personalized medicine. (I) is used for prediction of the therapeutic
 outcome of an individual with an established drug and for avoidance of
 side effects/toxicity due to altered activity of CYP2D6 mediated by
 different CYP2D6 alleles. (I) is useful as forensic markers. This
 sequence corresponds to a PCR primer to amplify the exon 6 region of the
 CYP2D6 gene for detection polymorphisms.

 PT acid sequence motif, useful for inducing B-cell activation, treating,
 PT preventing or ameliorating immune system disorder or tumoral disease e.g.
 PT melanoma.
 XX PS Claim 14; SEQ ID NO 26; 139pp; English.
 XX CC This invention relates to novel immunostimulatory oligonucleotides that
 CC contain a non-palindromic sequence motif. Specifically, it refers to DNA
 CC oligonucleotides (without a CpG motif), which can stimulate an immune
 CC response in animals of the order of primates, including humans. The immune
 CC response is characterised by the proliferation, differentiation, cytokine
 CC and antibody production in B-cells, as well as cell differentiation and
 CC cytokine production in plasmacytoid dendritic cells. The present
 CC invention describes immunomodulator compositions that also comprise an
 CC antigen selected from, for example, viruses, bacteria, parasites, tumour
 CC cells and glycolipids. As such, these DNA oligos can be used in gene
 CC therapy for inducing B-cell activation, treating, preventing or
 CC ameliorating an immune system disorder or a tumoural disease including
 CC chronic myelogenous leukaemia, melanoma, Kaposi's sarcoma, and renal cell
 CC carcinoma. This oligonucleotide sequence is an immunostimulatory non-CpG
 CC variant DNA oligo, used in an exemplification of the invention.

 XX Selecting siRNA by selecting an siRNA molecule of 19-25 nucleoside bases
 PT by selecting a target gene and measuring the functionality of the
 PT nucleotide sequences that are complementary to a stretch of nucleotides
 PT of the target sequence.
 XX
 XX Example 12; SEQ ID NO 687; 199pp; English.
 XX
 XX The invention relates to a novel method for selecting siRNA (short
 CC interfering RNA) comprising selecting an siRNA molecule of 19-25
 CC nucleoside bases by selecting a target gene and measuring the
 CC functionality of sequences of 19-25 nucleotides in length that are
 CC substantially complementary to a stretch of nucleotides of the target
 CC sequence, where the functionality is dependent upon non-target specific
 CC criteria. Also claimed are methods for gene-silencing, developing an
 CC siRNA algorithm for selecting siRNA, selecting an siRNA with improved
 CC functionality, selecting hyperfunctional siRNA, an siRNA molecule
 CC effective at silencing Bcl-2, and a kit for gene silencing comprising the
 CC siRNA. The siRNA molecule comprises a sequence substantially similar to a
 CC sequence consisting of GGGAGUAGUGAUGAAGUA; GAAGUACUCCAUUAUAG;
 CC GUACGACACCGGAGUA; AGAUAGUGAUGAAGUA; UGAAGACUCUGCAGUUG;
 CC CAUGCGCCUCUGUUGA; UGCGCCUCUGUUGA; GAGAUGUGAUGAAGUA;
 CC GGAGUAGUGAUGAAGUA; and GAAGACUCUGCAGUUG. The siRNA molecule
 CC comprises a sense strand and an anti-sense strand. The siRNA molecule
 CC comprises a hairpin. The siRNA molecule comprises between 18 and 30 base
 CC pairs. The kit comprises at least two siRNA, comprising a first optimised
 CC siRNA and a second optimised siRNA. The method is useful in selecting
 CC siRNA for generating a gene silencing reagent. The present sequence is
 CC used in the exemplification of the invention. The sequence is shown in
 CC the specification as DNA, but described as siRNA.

CC The invention describes an isolated soluble polypeptide comprising an
CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
CC described are: an antagonist antibody that binds to an extracellular
CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
CC diagnostic kit, comprising the above soluble polypeptide or antagonist
CC antibody, and a pharmaceutical carrier; methods of inhibiting
CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
CC cell; a method of reducing the growth rate of a tumour; methods for
CC treating a patient suffering from a cancer or an angiogenesis-associated
CC disease; and a method for identifying a tumor that is suitable for
CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
CC antibody is useful for manufacturing a medicament for the treatment of
CC cancer or an angiogenesis-associated disease. The composition and methods
CC are useful for diagnosing or treating cancer or angiogenesis-associated
CC diseases, such as inflammatory disorders, chronic articular rheumatism,
CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
CC represents a human ephrin B4 siRNA that can be used to control EphB4
CC expression.

 XX PT Use of N-benzoyl-staurosporine in manufacture of medicament for treatment
 PT of diabetic retinopathy with reduced hepatotoxicity in patients selected
 PT based on genotype of patients at IL1A genetic locus predictive of
 PT hepatotoxicity.
 XX PS Example; SEQ ID NO 9; 55pp; English.
 XX CC The invention comprises a method of using N-benzoyl-staurosporine in the
 CC manufacture of a medicament for the treatment of diabetic retinopathy
 CC with reduced hepatotoxicity in a selected patient population. The patient
 CC population is selected on the basis of the genotype of the patients at a
 CC genetic locus within the IL1A gene - the IL1A genetic locus is predictive
 CC of hepatotoxicity. The method of the invention is useful in the
 CC manufacture of a medicament for the treatment of diabetic retinopathy
 CC with reduced hepatotoxicity in a selected patient population. The present
 CC DNA sequence represents a PCR primer that was used to amplify exons 7, 8
 CC and 9 of the human CYP2D6 gene.

PT Eluting nucleic acid from nucleic acid-containing sample e.g., human
PT blood sample on storage media, by contacting sample on storage media with
PT elution buffer, eluting nucleic acid from sample and recovering eluted
PT nucleic acid.
XX
PS Example 1; SEQ ID NO 7; 54pp; English.
XX
XX The invention describes a method of eluting nucleic acid from a nucleic
CC acid-containing sample e.g., human blood sample on storage media. The
CC method involves providing a nucleic acid containing sample, preferably
CC human blood sample on storage media, contacting the sample on storage
CC media with an elution buffer comprising 10 mM Tris having a pH of 11.0-
CC 12.0, preferably 11.5-11.7, eluting nucleic acid from the sample on
CC storage media, and recovering eluted nucleic acid, where the human blood
CC sample is contacted with a wash buffer which is then removed before being
CC contacted with the elution buffer. Also described is a kit (I) for
CC eluting nucleic acid from a nucleic acid containing sample on storage
CC media, comprising an elution buffer having a pH of 11.0-12.0 and
CC instruction unit for eluting nucleic acid from a sample on storage media.
CC (M1) is useful for eluting nucleic acid such as DNA or RNA from a nucleic
CC acid-containing sample, preferably a human blood sample on storage media.
CC (M1) and (I) are useful for optimizing nucleic acid recovery depending on
CC the sample storage media and the intended use. The DNA eluted by (M1) is
CC useful for numerous downstream applications including PCR based

CC applications, short tandem repeat (STR) marker analysis, single
 CC nucleotide polymorphism (SNP) analysis and whole genome amplification
 CC (WGA). (M1) is simple, inexpensive and can be performed rapidly (30-60
 CC minutes). (M1) provides high quality DNA that can be used in various
 CC applications. (M1) avoids the use of toxic materials and is automaton-
 CC compatible. This sequence represents a primer used to detect beta-globin
 CC from blood samples.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or
 PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
 PT associated diseases, such as inflammatory disorders, psoriasis or
 PT scleroderma.

XX Example 8; Page 94; 198pp; English.

XX The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumour; methods for

CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a human ephrin B4 antisense oligonucleotide that can be used
 CC to control EphB4 expression.

XX New isolated nucleic acid compounds that hybridize to EphB4 or EphrinB2
PT transcripts or decrease the expression of EphB4 or EphrinB2 in cells,
PT useful for diagnosing or treating cancer or angiogenesis-associated
PT diseases.

XX Example 8; Page 101; 206pp; English.

XX The invention relates to an isolated nucleic acid compound comprising at
CC least a portion that hybridizes to an EphB4 or EphrinB2 transcript under
CC physiological conditions and decreases the expression of EphB4 or
CC EphrinB2 in a cell. The nucleic acid is useful for manufacturing a
CC medicament for the treatment of cancer or angiogenesis-associated
CC diseases. The composition and methods are useful for diagnosing or
CC treating cancer or angiogenesis-associated diseases, such as inflammatory
CC disorders, chronic articular rheumatism, psoriasis, ocular angiogenic
CC diseases or scleroderma. The present sequence represents a human EphB4
CC antisense probe.

 PT of a target gene.
 PT
 XX
 XX Claim 71; SEQ ID NO 177; 176pp; English.
 PS
 XX The present invention describes an RNA (I) used for the interference or
 CC inhibition of expression of a target gene, where (I) comprises double
 CC stranded RNA of 15-40 nucleotides in length and a 3' or 5' overhang
 CC having a length of 0-nucleotide to 5-nucleotides on each strand, where
 CC the sequence of the double stranded RNA is substantially identical to a
 CC portion of a mRNA or transcript of the target gene. Also described: (1)
 CC interfering with or inhibiting the expression of a target gene in a cell
 CC by exposing the cell to an amount of (I); (2) a gene silencing array
 CC comprising a substantially flat substrate, and addressably arrayed
 CC different double-stranded RNAs; (3) an array-based method of assessing a
 CC phenotypic effect of a double-stranded RNA on a target gene; (4)
 CC validating a gene as a potential drug target for a disease or condition;
 CC (5) selecting an optimised sequence of a double-stranded RNA for
 CC interference with or inhibition of expression of a target gene in a cell;
 CC and (6) a short double-stranded RNA effective for interfering with or
 CC inhibiting expression of a target gene comprising any of 311-20-78
 CC nucleotide sequences (see ADC16276 to ADC16586). (I) has cytostatic
 CC activity, and can be used in gene therapy. The RNAs are useful as reverse
 CC genetic and/or therapeutic tools for interfering or inhibiting expression
 CC of a target gene. They are useful for treating proliferative diseases,
 CC e.g. cancer.

 PT
 XX Claim 1; SEQ ID NO 25; 51pp; English.
 PS
 XX This invention relates to novel primer sets that can be used to screen a
 CC polynucleotide sample to detect and identify variants in the cytochrome
 CC P450 isoenzyme 2D6 (CYP2D6) gene. The gene is located on chromosome
 CC 22q13.1 and contains several single nucleotide polymorphisms, the details
 CC of which are disclosed in the specification. The methods and compositions
 CC of the present invention are useful for screening a polynucleotide sample
 CC to detect and identify variants in the cytochrome P450 isoenzyme 2D6 gene
 CC and detecting low frequency variants affecting pharmaceutical drugs
 CC metabolism. The present sequence is that of a PCR primer which may be
 CC used in the primer sets of the invention.

 DR Novel primer set for screening a polynucleotide sample to detect and
 XX identify variants in the cytochrome P450 isoenzyme 2D6 (CYP2D6) gene in a
 PT polynucleotide sample or a population.
 PT Claim 1; SEQ ID NO 25; 47pp; English.
 PS The present invention relates to a primer set that can be used to screen
 XX a polynucleotide sample to detect and identify variants in the human
 CC cytochrome P450 isoenzyme 2D6 (CYP2D6) gene. Also disclosed is a kit for
 CC the above screening method, a method for predicting the potential for
 CC altered metabolism of a substance, including one or more than one
 CC pharmaceutical drug, by a first individual compared to a second control
 CC individual, where the substance is metabolized by the CYP2D6 isoenzyme, a
 CC purified or isolated variant of wild-type CYP2D6 isoenzyme having one or
 CC more than one of the alterations chosen from F-I at position 120, F-F at
 CC position 120, E-K at position 155, R-R at position 194, F-F at position
 CC 219, L-L at position 276, H-H at position 324, R-STOP at position 344, Y-
 CC C at position 355, H-H at position 361, V-FRAMESHIFT at position 363, E-K
 CC at position 418, H-Y at position 478 and F-F at position 483. The primer
 CC set is useful for screening a polynucleotide sample to detect and
 CC identify the presence of one or more than one variant in the CYP2D6 gene
 CC in the sample. The primer set permits amplification from a small
 CC polynucleotide sample of selected portions of the coding portion of the
 CC CYP2D6 gene, or amplification of the entire coding portion of CYP2D6, as
 CC well as the flanking intronic sequences that are relevant to recognition
 CC of splice sites. The primer set further permits the detection of genetic
 CC variants of CYP2D6 without interference from pseudogenes or from
 CC homologous or paralogous genes of non-CYP2D6 cytochrome p450 genes. The
 CC primer set also permits the detection of low frequency variants that
 CC affect pharmaceutical drugs metabolism, thereby decreasing the false
 CC negative rate in variant screening. The present sequence represents a PCR
 CC primer of the invention.

 XX Elucidating RNA transcription profile in eukaryotic cell by producing
 PT cloned tags using construct having exon marker sequence and comparing
 PT sequence tags to sequence database and identifying RNA transcript
 PT specific to sequenced tags.
 PS Example 2; SEQ ID NO 5; 32pp; English.
 XX The invention relates to elucidating the RNA transcription profile in a
 CC eukaryotic cell by introducing into the cell a polynucleotide construct
 CC comprising an exon marker sequence, subjecting cDNA obtained by reverse
 CC transcription to digestion with a first Type IIS restriction enzyme, self
 CC -ligating the fragments, amplifying a region of the fragment containing
 CC the exon tags, cloning the fragments, and comparing sequence tags to
 CC sequence database. The tags obtained are typically 40 nucleotides in
 CC length compared to 20 nucleotides obtained from prior art methods. Also
 CC included are a polynucleotide construct (comprising, in a 5' to 3'
 CC orientation, a splice acceptor sequence, a type IIS restriction enzyme
 CC recognition site oriented so that it is capable of cleaving DNA fused
 CC upstream of the 5' end of a marker exon, restriction enzyme recognition
 CC site, marker exon, a type IIS restriction enzyme recognition site
 CC oriented so that it is capable of cleaving sequences located downstream
 CC of the 3' end of the marker exon, and splice donor sequence or comprising
 CC a marker exon sequence flanked by a functional 5' splice acceptor
 CC sequences and a 3' splice donor sequence, and where the marker exon
 CC contains at least two RER sites at the 5' end of the marker exon, at
 CC least one the 5' RER sites is recognized by a type IIS restriction enzyme
 CC and oriented in such a way that a type IIS restriction enzyme cuts the
 CC DNA outside the boundaries that define the marker exon, and the marker
 CC exon contains at least two RER sites at the 3' end of the marker exon,
 CC where at least one of the 3' RER sites is recognized by a Type IIS
 CC restriction enzyme and oriented in such a way that a Type IIS restriction
 CC enzyme cuts the DNA outside the boundaries that define the marker exon,
 CC and where the restriction recognition sites are located close from the
 CC border of the marker exon such that after cutting flanking exons generate
 CC sequence tags of at least 8 nucleotides), a vector comprising the above
 CC construct, a polynucleotide construct Pgt13, and a polynucleotide
 CC construct pGfso-M. The method further involves ligating the amplified
 CC fragments together to form a concatamer prior to cloning. In the method,
 CC the polynucleotide construct is contained within a (viral) vector (e.g. a
 CC retroviral vector, a lentiviral vector and an adeno-associated viral
 CC vector, preferably retroviral vector). The marker exon marker sequence
 CC encodes a fluorescent protein, preferably a green fluorescent protein.
 CC The method, referred to as SAVI (Serial analysis of vector (or viral)
 CC integration) is useful for elucidating a RNA transcription profile in a
 CC eukaryotic cell. The method is also useful for functional genome
 CC annotation, high throughput sequencing and characterization of exon-
 CC intron boundaries, and for determining the relative transcriptional level
 CC of tagged RNA variant. The method of the invention was used to analyse
 CC the RNA transcription profile of 107 (unidentified) cells. The present
 CC sequence is a nested PCR primer used to amplify the tags in the above
 CC experiment.

XX Activated mutant protein tyrosine kinases (e.g. NTRK3, FES and MCKK) and
PT associated methods for diagnosing cancer and screening for anti-cancer
PT agents.

XX Disclosure; SEQ ID NO 1281; 363pp; English.

XX This invention relates to a novel activated mutant protein tyrosine

CC kinases and associated methods for diagnosing cancer and screening for
CC anti-cancer agents. Protein kinases are signalling molecules involved in
CC tumorigenesis. Mutational analysis of the human tyrosine kinase gene
CC family identified somatic alteration sin 1 in 5 colorectal cancers, with
CC the majority of mutations occurring in the NTRK3, FES, GUCY2F and
CC MCKK/MLK4 genes. Most were identified in the kinase domain. The invention
CC may be useful for the production of compounds with a cytostatic activity
CC acting as protein tyrosine kinase inhibitors or guanylate cyclase
CC stimulators. The invention may be useful for developing methods for
CC detecting mutations involved in cancer or screening for anti-cancer
CC agents. The present sequence is that of a human-derived oligonucleotide
CC which is related to the invention.

XX Novel antisense compound targeted to nucleic acids encoding human or
PT mouse CCAAT/enhancer binding protein (C/EBP) beta, useful in vitro for
PT inhibiting expression of human or mouse C/EBP beta in cells/tissues.
XX
PS Claim 1; Col 42; 69pp; English.
XX
XX Sequences ABL94252-ABL94476 represent antisense oligonucleotides targeted
CC to the human or mouse CCAAT/enhancer-binding protein alpha (C/EBP alpha)
CC gene, which inhibit its expression. The antisense oligonucleotides were
CC designed to target different regions of the human and/or mouse C/EBP
CC alpha RNA, and were analysed for their effect on C/EBP alpha mRNA levels
CC by quantitative real-time PCR. The C/EBP family of proteins are a family
CC of transcription factors which regulate the expression of a wide range of
CC genes that control normal tissue development, cellular function, cellular
CC proliferation and functional differentiation. C/EBP beta (also known as
CC C/EBP2, LAP, TCF5, CRP2, NFIL6, IL6DBP, NF-M, AGP/EBP and Apc/EBP)
CC primarily regulates hormone responsiveness and oxidative stress responses
CC and is a mediator of IL-6 (interleukin-6) signalling. C/EBP beta is
CC thought to be involved in carbohydrate metabolism, immunity, the Th1
CC response, female fertility and gluconeogenic pathways. C/EBP beta is
CC expressed in the liver, lung, spleen, kidney, brain, and testis, with the
CC highest expression found in the lung. It is also expressed at a higher
CC level in malignant ovarian tissue compared with normal ovarian tissue.
CC and its expression in pancreas is upregulated in response to chronically
CC elevated levels of glucose, indicating that it is involved in the
CC impairment of insulin secretion in type II diabetes. The oligonucleotides
CC of the invention are useful for diagnosis, prevention and treatment of
CC conditions associated with C/EBP beta expression, such as cancer
CC (particularly ovarian cancer), tumour formation, diabetes (particularly
CC type II diabetes), infection, or inflammation

PT Inferring a statin response from a nucleic acid sample, by haplotype
PT allele indicative of statin response, a decrease in total cholesterol, or
PT in low density lipoprotein infers a statin response of the subject.
XX
XX Example 1; SEQ ID NO 13; 323pp; English.
XX
XX The invention relates to a novel method for inferring a statin response
CC from a nucleic acid sample comprising identifying in the nucleic acid
CC sample, at least one haplotype allele indicative of a statin response.
CC The haplotype allele may comprise nucleotides of the cytochrome p450 3A4
CC (CYP3A4) gene, nucleotides of the cytochrome p450 2D6 (CYP2D6) gene or
CC nucleotides of the 3-hydroxy-3-methylglutaryl-coenzyme A reductase
CC (HMGCR) gene. The method of the invention may be useful for inferring a
CC statin response of a human subject from a nucleic acid sample, where the
CC human subject is a Caucasian subject and the statin is atorvastatin or
CC simvastatin. The method may also be useful for determining whether to
CC prescribe statin to a patient with elevated serum cholesterol levels in
CC order to prevent heart attack. The current sequence is that of the PCR
CC primer of the invention which was used to identify the human CYP2D6E7_339
CC polymorphism DNA.

XX New soluble polypeptides comprising an extracellular domain of EphB4 or
PT Ephrin B2 protein for diagnosing or treating cancer or angiogenesis-
PT associated diseases, such as inflammatory disorders, psoriasis or

PT scleroderma.
 PS Example 6; Page 86; 198pp; English.
 XX
 CC The invention describes an isolated soluble polypeptide comprising an
 CC amino acid sequence of an extracellular domain of an EphB4 or Ephrin B2
 CC protein. The EphB4 or Ephrin B2 polypeptide is a monomer, the EphB4
 CC polypeptide binds specifically to the Ephrin B2 polypeptide, and the
 CC Ephrin B2 polypeptide binds specifically to the EphB4 polypeptide. Also
 CC described are: an antagonist antibody that binds to an extracellular
 CC domain of the EphB4 or Ephrin B2 protein and inhibits an activity of the
 CC EphB4 or Ephrin B2; a pharmaceutical or cosmetic composition, or a
 CC diagnostic kit, comprising the above soluble polypeptide or antagonist
 CC antibody, and a pharmaceutical carrier; methods of inhibiting
 CC angiogenesis or inhibiting signaling through Ephrin B2/EphB4 pathway in a
 CC cell; a method of reducing the growth rate of a tumour; methods for
 CC treating a patient suffering from a cancer or an angiogenesis-associated
 CC disease; and a method for identifying a tumor that is suitable for
 CC treatment with an EphrinB2 or EphB4 antagonist. The polypeptide or
 CC antibody is useful for manufacturing a medicament for the treatment of
 CC cancer or an angiogenesis-associated disease. The composition and methods
 CC are useful for diagnosing or treating cancer or angiogenesis-associated
 CC diseases, such as inflammatory disorders, chronic articular rheumatism,
 CC psoriasis, ocular angiogenic diseases or scleroderma. This sequence
 CC represents a primer used in the isolation of human ephrin B4 cDNA.

 DR
 XX Identifying and characterizing cells by comparing the pattern of gene
 PT expression in a selected gene family.
 PS Claim 4; Page 48; 102pp; English.
 XX
 CC The invention provides a new method for identifying and characterising
 CC cells. The method for determining the genetic proximity of a first cell
 CC and a second cell comprises: (a) obtaining the first cell and the second
 CC cell; (b) determining in the first cell and the second cell the pattern
 CC of expression of genes in a selected gene family; and (c) calculating a
 CC proximity index using a specified formula. The methods can be used for
 CC characterising cells, e.g. for determining the origin of a cell, its
 CC genetic status, whether it carries a genetic defect, or whether it is
 CC an individual, e.g. a fetus. They can also be used for determining the
 CC effect of a selected treatment on a test cell. They can also be used for
 CC obtaining cells capable of expressing an homeobox related desired
 CC property. The method uses reverse transcriptase polymerase chain reaction
 CC (RT-PCR) for determining the pattern of gene expression in a selected
 CC gene family. Sequences AAZ17803-Z18342 represent primers that can be used
 CC in the RT-PCR reactions to determine the pattern of gene expression. The
 CC gene family can be selected from a set of homeobox genes, kinase genes,
 CC protein phosphatase genes, P450 enzyme genes, steroid receptor
 CC superfamily genes or cadherin superfamily genes

 PT Selecting agents useful for treating Alzheimer's disease comprises
 PT contacting focal adhesion kinase 2 with a test agent and measuring a

PT biological activity related to focal adhesion kinase 2 function with or
PT without the test agent.

XX Disclosure; SEQ ID NO 6; 247pp; English.

XX The present invention relates to a method for selecting agents that are
CC potentially useful for the treatment of Alzheimer's disease. The method
CC comprises contacting Focal Adhesion Kinase 2 (FAK2) with a test agent and
CC measuring a biological activity related to FAK2 function in the presence
CC and absence of the test agent. The method is useful for screening
CC compounds or agents that can be used to treat neurological disorders,
CC ailments and diseases including mild cognitive impairment, depression,
CC schizophrenia, obsessive-compulsive disorder, bipolar disorder, and
CC neurodegenerative diseases and disorders and motor neuron diseases and
CC disorders such as Alzheimer's disease, Parkinson's disease, dementia with
CC Lewy bodies, amyotrophic lateral sclerosis or Lou Gehrig's disease,
CC Alpers' disease, Leigh's disease, Pelizaeus-Merzbacher disease,
CC Olivopontocerebellar atrophy, Friedreich's ataxia, leukodystrophies, Rett
CC syndrome, Ramsay Hunt syndrome type II, and Down's syndrome, as well as
CC for treating or preventing other diseases such as dyslipidemia, diabetes,
CC obesity, cardiovascular diseases such as atherosclerosis and coronary
CC heart disease. Also disclosed is the coding sequence for a novel human
CC phosphatase called PN7740 (ADU78628 and ADU78629). PN7740 contains a
CC protein phosphatase 2C domain, which likely acts to dephosphorylate
CC specific phospho-serine or phospho-threonine residues on particular
CC protein substrates. Although the precise role played by protein
CC phosphatase 2Cs in Alzheimer's disease pathogenesis has yet to be
CC defined, the inventors have discovered that fragments of PN7740 interact
CC with the first phosphotyrosine binding domain (PTB) domain of Fe65 (also
CC known as APPB1(710) or amyloid beta (A4) precursor protein-binding,
CC family B, member 1, isoform E9 (710)), suggesting that PN7740 may well be
CC involved somehow. Fe65 is known to interact with the cytosolic C-terminal
CC region of Amyloid beta (A4) precursor protein (APP) and APP metabolism is
CC critical to the pathogenesis of Alzheimer's disease, because it leads to
CC the release of either toxic Abeta or trophic secreted APP (sAPP)
CC metabolites. The present sequence is an antisense oligonucleotide which
CC can be used in antisense therapy for Alzheimer's disease.

XX Use of mixed lineage kinase family kinase inhibitor in the manufacture of
PT a medicament for treatment of asthma associated at-risk haplotype for
PT asthma, at-risk haplotype in MAP3K9 gene or increased MLK1 protein
PT expression or activity.
XX Disclosure; Fig 12; 640pp; English.

XX The invention relates to the novel use of a mixed lineage kinase (MLK)
CC family kinase inhibitor for treating asthma. Where the asthma is
CC associated with a risk factor selected from an at-risk haplotype for
CC asthma at-risk haplotype in MAP3K9 gene, polymorphism in MAP3K9 nucleic
CC acid, dysregulation of MAP3K9 mRNA expression, dysregulation of a MAP3K9
CC mRNA isoform, and/or increased MLK1 protein expression. The invention
CC further comprises: a method for the diagnosis or identification of
CC susceptibility to asthma; a method for the use of a first nucleic acid
CC molecule for diagnosing asthma or susceptibility to asthma in a sample; a
CC method for assaying the presence of a first nucleic acid molecule in a
CC sample; a method for assessing the response to treatment with an MLK
CC family kinase nucleic acid inhibitor in a target population or in an
CC individual with an at-risk haplotype for asthma, at-risk haplotype in the
CC MAP3K9 gene, polymorphism in the MAP3K9 nucleic acid, dysregulation of
CC MAP3K9 mRNA expression, dysregulation of MAP3K9 mRNA isoform, increased
CC MLK1 protein expression, increased MLK1 biochemical activity or increased
CC MLK1 protein isoform expression; a method for assessing the response to
CC treatment with an MLK1 inhibitor in a target population including an
CC individual with an at-risk haplotype for asthma, as above; a kit for
CC assaying a sample for the presence or absence of at least one haplotype
CC comprising 2 or more alleles associated with asthma comprising: at least
CC one nucleic acid capable of detecting the presence or absence of at least
CC one specific allele; a reagent kit for assaying the presence of at least
CC one haplotype comprising 2 or more alleles comprising: at least one
CC labeled nucleic acid capable of detecting at least one specific allele of
CC the haplotype, and reagents for detection of the label; and a reagent kit
CC for assaying a sample for the presence of at least one haplotype
CC comprising 2 or more alleles comprising: at least one nucleic acid
CC comprising at least one nucleotide sequence that is at least partially
CC complementary to a part of nucleotide sequence of MAP3K9, capable of
CC acting as a primer for a primer extension reaction and capable of
CC detecting 2 or more specific alleles of the haplotype. The MLK family
CC kinase inhibitor has the following activities: antiasthmatic, respiratory
CC -gen., antiinflammatory, antirheumatic, antiarthritic, antipsoriatic,
CC neuroprotective, and gastrointestinal-gen. The MLK family kinase
CC inhibitor is useful for the treatment of asthma associated with a risk
CC factor selected from at-risk haplotype for asthma, at-risk haplotype in
CC MAP3K9 gene, polymorphism in MAP3K9 nucleic acid, dysregulation of MAP3K9
CC mRNA expression, dysregulation of MAP3K9 mRNA isoform, increased MLK1
CC protein expression, increased MLK1 biochemical activity and/or increased
CC MLK1 protein isoform expression; and in diagnosis or identification of
CC susceptibility to asthma. The inhibitor is also useful for the treatment
CC of other respiratory diseases associated with MAP3K9 or other members of
CC the JNK pathway such as chronic obstructive pulmonary disease, chronic
CC bronchitis and other inflammatory diseases such as rheumatoid arthritis,
CC psoriasis, multiple sclerosis and inflammatory bowel disease. This
CC polynucleotide sequence represents a reverse primer which is used in
CC amplifying a marker of the MAP3K9 kinase, where MAP3K9 is a part of
CC Mitogen-Activated Protein Kinase (MAPK) signal transduction pathways, of
CC the invention.

 XX

Identifying and characterizing cells by comparing the pattern of gene
 expression in a selected gene family.

Claim 4; Page 46; 102pp; English.

The invention provides a new method for identifying and characterising
 cells. The method for determining the genetic proximity of a first cell
 and a second cell comprises: (a) obtaining the first cell and the second
 cell; (b) determining in the first cell and the second cell the pattern
 of expression of genes in a selected gene family; and (c) calculating a
 proximity index using a specified formula. The methods can be used for
 characterising cells, e.g. for determining the origin of a cell, its
 genetic status, whether it carries a genetic defect, or whether it is
 transformed. They can be used for detecting a selected genetic defect in
 an individual, e.g. a fetus. They can also be used for determining the
 effect of a selected treatment on a test cell. They can also be used for
 obtaining cells capable of expressing an homeobox related desired
 property. The method uses reverse transcriptase polymerase chain reaction
 (RT-PCR) for determining the pattern of gene expression in a selected
 gene family. Sequences AAZ17803-218342 represent primers that can be used
 in the RT-PCR reactions to determine the pattern of gene expression. The
 gene family can be selected from a set of homeobox genes, kinase genes,
 protein phosphatase genes, P450 enzyme genes, steroid receptor
 superfamily genes or cadherin superfamily genes

XX
PT Reagent for modulating the activity of a protein phosphatase 2C-like
PT enzyme, used for treating diseases, such as, obesity or diabetes,
PT comprises e.g. a polynucleotide, polypeptide, ribozyme, or antisense
PT oligonucleotide.
XX
PS Example 10; Page 83; 121pp; English.
XX
CC The present sequence is a forward primer for the human protein
CC phosphatase 2C-like enzyme (PP2CLE) gene (see AB258379). The primer was
CC used in a Taqman quantitative analysis to determine expression of PP2CLE
CC in different tissues and cell lines. High expression was observed in
CC spinal cord, uterus, skeletal muscle, mammary gland, kidney, trachea,
CC colon and brain, in primary cultured alveolar type II cells, cultured
CC small airway epithelial cells and in cultured human bronchial epithelial
CC cells. The invention provides PP2CLE polynucleotides, polypeptides,
CC expression vectors, host cells and methods of producing PP2CLE
CC polypeptides and detecting PP2CLE polynucleotides. Also provided are
CC methods of using the polypeptides and polynucleotides to screen for
CC reagents which decrease or modulate the activity of PP2CLE. Claimed
CC pharmaceutical compositions comprising an expression vector or an
CC identified reagent are used to modulate the activity of PP2CLE in a
CC disease, especially central nervous system (CNS) disorders, chronic
CC obstructive pulmonary disorder, obesity and diabetes (Claimed). Other
CC diseases that can be treated include Alzheimer's disease, Parkinson's
CC disease, and pain associated with CNS disorders

PT Pharmaceutical composition comprising an agent capable of modulating an
PT expression level or protein activity of a gene, e.g. ABCA4, or a T cell
PT activated by the polypeptide or antibody, and a carrier, useful for
PT treating cancer.

XX Claim 3; SEQ ID NO 4062; 113pp; English.
PS
XX
CC The present invention relates to a novel pharmaceutical composition
CC comprising: (a) an agent capable of modulating an expression level or
CC protein activity of a cancer-related transmembrane protein (CRTP) or gene
CC , an antibody specific for a CRTP, or a T cell activated by a CRTP; and
CC (b) a carrier. The pharmaceutical composition may also comprise a
CC polynucleotide capable of inhibiting or decreasing the expression of the
CC CRTP by RNA interference or an antisense mechanism. The CRTPs of the
CC invention are selected from ABCC4, C20orf103, CACNA1D, CDH6, CST, ENPPP3,
CC FLJ11856, GPR54, HAVCR1, SLC6A3, SLC30A4, TRG, and TRPM4. The
CC pharmaceutical composition is useful for treating cancer, e.g. colon
CC cancer, lung cancer, breast cancer, prostate cancer, liver cancer, kidney
CC cancer, stomach cancer, and esophageal cancer. The present sequence is a
CC CRTP short interfering RNAs (siRNA) oligonucleotide. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX Antisense compounds capable of modulating expression of human Her-3,
PT member of epidermal growth factor family of receptor/tyrosine kinases,
PT useful for preventing or delaying infection, inflammation or tumor
PT formation.
XX
PS Claim 1; Col 42; 49pp; English.
XX
CC The invention provides antisense compounds capable of inhibiting the
CC expression of human Her-3, a member of epidermal growth factor (EGF)
CC family of receptor/tyrosine kinases. The antisense oligonucleotides are
CC useful for inhibiting the expression of Her-3 in cells or tissues. They
CC are commonly used as research reagents and in diagnostics for example, to

CC elucidate the function of particular genes. The antisense compounds are
 CC also useful for distinguishing between functions of various members of a
 CC biological pathway and for research use. They are also utilized for
 CC diagnostics, therapeutics, prophylaxis and in kits. They are useful
 CC prophylactically, e.g. to prevent or delay infection, inflammation or
 CC tumor formation. Sequences AAH47532-47615 represent chimeric antisense
 CC phosphorothioate oligonucleotides having 2'-MOE wings and a deoxy gap,
 CC used for the inhibition of Her-3 mRNA expression

 XX
 PT Identifying a candidate polymorphic repeat within a coding sequence, for
 PT understanding or treating genetic disease, comprises detecting tandem
 PT repeats in a target coding sequence and scoring the repeats for
 PT polymorphic probability.
 XX
 PS Example; Col 1165; 588pp; English.
 XX
 CC The invention discloses a method for identifying a candidate polymorphic
 CC repeat within a coding sequence (expressed sequence tag, EST), which
 CC comprises detecting tandem repeats in a target coding sequence, scoring
 CC the repeats for polymorphic probability and generating a dataset
 CC correlating the repeats with polymorphic probability to identify a
 CC candidate polymorphic repeat. The computational methods (polymorphic
 CC marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are
 CC useful for identifying and detecting candidate polymorphic repeats in
 CC human genes, which can be used to understand, treat or eliminate genetic
 CC diseases, predispositions or adverse drug-treatment reactions. Examples
 CC of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
 CC syndrome, Huntington's disease, fragile-X syndrome, Friedrich's ataxia,
 CC myotonic dystrophy, hyperandrogenaemia, spinal and bulbar atrophy and

CC spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are
 CC the polymorphic repeats identified for a search of human ESTs

PT Novel SCNSA gene of sodium channel alpha subunit, with mutations in which
PT glycine being substituted by serine, and serine being substituted by
PT leucine, at specific positions, useful as marker for diagnosing Brugada
PT syndrome.
XX
PS Example 1; Page; 30pp; Japanese.
XX
CC The invention relates to an novel SCNSA gene of a sodium channel alpha
CC subunit. The novel SCNSA gene comprises the mutation G292S between the
CC fifth and sixth membrane passing-through subunits of the first domain;
CC and/or the mutation S835L of the intracellular loop between the fourth
CC and fifth membrane passing-through subunits of the second domain. The
CC novel SCNSA gene can be used as a Brugada syndrome marker, for diagnosing
CC Brugada syndrome. Brugada syndrome causes idiopathic ventricular
CC fibrillation, thus the gene/marker allow for the prevention or treatment
CC of the syndrome. This oligo sequence represents a primer used to amplify
CC an exon of the SCNSA gene of the invention.

PT New GPCR-A-1 nucleic acid and polypeptide, useful for diagnosing,
PT investigating and/or treating disorders associated with aberrant
PT expression or activity of GPCR-A-1, such as tumors and cancers.
XX Example 2; SEQ ID NO 384; 156pp; English.
XX The invention describes an isolated nucleic acid encoding a G protein
CC coupled receptor (GPCR), mutations of which cause cancer, comprising a
CC 2225 or 1921 base pair sequence, or their degenerate variants, encoding a
CC 409 residue amino acid sequence, all given in the specification, with or
CC without conservative amino acid substitutions, or complements of the
CC sequence of them. The encoding nucleic acid is not more than 100 base in
CC length. The methods and compositions of the present invention are useful
CC for diagnosing, investigating and/or treating disorders associated with
CC aberrant expression or activity of GPCR-A-1, such as tumors and cancers.
CC This sequence represents an oligonucleotide used to analyse the gene
CC encoding human G-protein coupled receptor GPCR-A-1

XX New isolated nucleic acid, useful for treating viral diseases associated
PT with tumors and cell degeneration, also related polypeptides, antibodies
PT and transfected cells.
XX Disclosure; Page 425; 720pp; French.
XX The invention relates to a novel isolated 17 mer nucleic acid sequence,
CC given in the specification, a sequence containing at least 15 consecutive
CC nucleotides from the 17 mer sequence, a sequence with, after optimal
CC alignment, at least 80 % identity to the 17 mer sequence, a sequence that
CC hybridizes to them under highly stringent conditions, or the complement
CC of any of them, or the corresponding RNA. The novel isolated nucleic
CC acids of the invention are useful as probes and primers for detecting,

CC identifying, quantifying and/or amplifying a nucleic acid, e.g. as one
CC component of a gene chip, in vitro as (anti)sense reagents, and for
CC production of recombinant polypeptides. Any of the nucleic acids,
CC polypeptides, vectors containing the nucleic acids, cells containing the
CC vector or antibodies directed against the polypeptides are useful for
CC preparation of pharmaceuticals for prevention and/or treatment of viral
CC diseases that are characterised by development of tumours or cell
CC degeneration, specifically cancer but also Alzheimer's disease and
CC schizophrenia. Analysis of the expression of the 17 mer nucleic acids in
CC patient samples is useful for diagnosis and/or prognosis of these
CC diseases. The polypeptides can also be used to generate antibodies, and
CC both the polypeptide and antibodies are useful as components of protein
CC chips. The nucleic acid sequences of the invention can be used in gene
CC therapy. This polynucleotide sequence represents a tumour suppression
CC related human fukutin oligonucleotide of the invention

XX
PT Treating proliferative skin or eye diseases and scarring, using ribozymes
PT that cleave RNA encoding cytokines involved in inflammation, matrix
PT metalloproteinases, growth factors and cell-cycle dependent kinases.
XX
PS Example 1; Page 77; 408pp; English.
XX
CC The present invention describes a method for treating a proliferative
CC skin or eye disease and scarring. The method involves administering a
CC ribozyme (I) which cleaves RNA encoding a cytokine involved in
CC inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle
CC dependent kinase, growth factor or a reductase, or administering a
CC nucleic acid molecule (II) comprising a promoter operably linked to a
CC nucleic acid segment encoding (I). (I) can have antipsoriatic,
CC dermatological, cytostatic, antiseborrheic, antidiabetic, antisickling,
CC ophthalmological, vulnary, keratolytic and virucide activities, and
CC cleaves RNA encoding cytokine involved in inflammation. (I) can be used
CC in gene therapy. (I) and (II) are useful for treating proliferative skin
CC diseases such as psoriasis, atopic dermatitis, actinic keratosis,
CC squamous or basal cell carcinoma and viral or seborrheic wart. They can
CC also be used for treating proliferative eye diseases such as diabetic
CC retinopathy, vitreoretinopathy, sickle cell retinopathy, retinopathy of
CC prematurity and retinal detachment, and for treating and preventing
CC scarring such as keloid, adhesion and hypertrophic or hypertrophic burn
CC scar. AAH57577 to AAH62099 represent sequences used in the
CC exemplification of the present invention

XX Set of novel map-related biallelic markers, preferably located on obesity
PT disorder-associated chromosomal regions on chromosomes 3, 10 and 19,
PT

PT useful, for e.g. detecting statistical correlations between marker allele
 PT and a phenotype.

XX Example 2; Page 278; 31pp; English.

XX The invention relates to a set of novel map-related biallelic markers,
 CC preferably located on obesity disorder-associated chromosomal regions on
 CC chromosomes 3, 10 and 19. The markers are useful for genotyping or
 CC estimating the frequency of an allele in a population, for detecting an
 CC association between a genotype or haplotype and a phenotype, for detecting an
 CC disease involving drug responses, obesity or disorders related to
 CC obesity, such as hyperuricaemia, digestive pathology, hepatic function
 CC disorders, cancer, cardiovascular disease, hypertension, hyperlipidaemia,
 CC insulin disorders, atheromatous disease and cardiac insufficiency. The
 CC markers are useful for detecting a statistical correlation between a
 CC biallelic marker allele and a phenotype and/or between a biallelic marker
 CC haplotype and a phenotype. This sequence represents a PCR primer used to
 CC amplify a human obesity-associated biallelic marker

 PT associated methods for diagnosing cancer and screening for anti-cancer
 PT agents.

XX Disclosure; SEQ ID NO 1514; 363pp; English.

XX This invention relates to a novel activated mutant protein tyrosine
 CC kinases and associated methods for diagnosing cancer and screening for
 CC anti-cancer agents. Protein kinases are signalling molecules involved in
 CC tumorigenesis. Mutational analysis of the human tyrosine kinase gene
 CC family identified somatic alteration sin 1 in 5 colorectal cancers, with

CC the majority of mutations occurring in the NTRK3, FES, GUCY2F and
 CC MCKK/MLK4 genes. Most were identified in the kinase domain. The invention
 CC may be useful for the production of compounds with a cytostatic activity
 CC acting as protein tyrosine kinase inhibitors or guanylate cyclase
 CC stimulators. The invention may be useful for developing methods for
 CC detecting mutations involved in cancer or screening for anti-cancer
 CC agents. The present sequence is that of a human-derived oligonucleotide
 CC which is related to the invention.

XX Pharmaceutical composition for treating ailments associated with impaired
 PT respiration, has oligo(s) antisense to specific gene(s) or its
 PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
 PT ubiquinone.

XX Disclosure; SEQ ID NO 14488; 872pp; English.

XX The invention relates to a novel pharmaceutical composition, which has a
 CC first active agent comprising an oligonucleotide antisense to the
 CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
 CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
 CC junctions of genes encoding a polypeptide associated with lung and/or
 CC nasal airway dysfunction and a second active agent comprising an
 CC antiinflammatory steroid and ubiquinone. A composition of the invention
 CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
 CC immunosuppressive, and cytostatic activity. The composition may have a
 CC use in antisense gene therapy. The composition is useful for treating or
 CC preventing a respiratory, lung or malignant disease or condition, also
 CC for enhancing the prophylactic or therapeutic respiratory effect of an

CC antiinflammatory steroid in a subject, for reducing or depleting levels
 CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
 CC receptor, producing bronchodilation, increasing levels of ubiquinone or
 CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
 CC lung inflammation, lung allergies, or a respiratory disease or condition.

 DR
 XX Pharmaceutical composition for treating asthma, has antisense
 PT oligonucleotide containing less percentage of adenosine, targeted to
 PT nucleic acids associated with lung airway or lung dysfunction, and
 PT bronchodilating agent.
 XX
 XX Claim 15; SEQ ID NO 14488; 763pp; English.
 PS
 XX This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyposecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)

CC instructions for adding a carrier and for use of the kit. The composition
 CC of the invention has anti-allergic, antiinflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

 XX Novel single or multiple target oligonucleotide anti-sense to e.g.
 PT initiation codons and introns of respiratory disease-relevant genes e.g.,
 PT CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory
 PT disease e.g., asthma.
 PT
 XX Claim 2; SEQ ID NO 1987; 85pp; English.
 PS
 XX The present invention relates to an oligonucleotide anti-sense to e.g.,

CC initiation codon, coding region with 2-10 nucleotides of 5'-end and 3'-
 CC end of nucleic acid target comprising gene(s) chosen from e.g.
 CC interleukin (IL)-4 receptor, IL-5 receptor or salts of the
 CC oligonucleotide and optionally surfactant operatively linked to the
 CC oligonucleotide. The method is useful for preventing or treating a
 CC respiratory or lung disease, which involves administering to the airways
 CC of a subject an effective amount of an inhibitor. The oligonucleotide is
 CC useful for production of a medicament for the prevention and/or treatment
 CC of a respiratory or lung disease. The respiratory or lung disease is
 CC chosen from airway inflammation, allergy(ies), asthma, impeded
 CC respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases
 CC (COPD), allergic rhinitis (AR), acute respiratory distress syndrome
 CC (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway
 CC obstruction. The present sequence represents an oligonucleotide of the
 CC invention.

 DR
 XX Novel primer for diagnosing polycystic kidney disease-associated
 PT disorder, comprises regions having sequence that selectively hybridizes
 PT to polycystic kidney disease gene sequence.
 XX
 XX Claim 6; Page 101; 192pp; English.
 PS
 XX The present invention relates to compositions and methods useful for the
 CC identification and detection of polycystic kidney disease (PKD1) gene
 CC mutations. The invention also relates to primers comprising a 5' region
 CC having a sequence that selectively hybridizes to a PKD1 gene sequence and
 CC optionally, to a PKD1 homologue sequence and an adjacent 3' region having
 CC a sequence that selectively hybridizes to a PKD1 gene sequence and not to
 CC a PKD1 homologue sequence. Primer pairs of the invention are useful for
 CC detecting the presence or absence of a mutation in a PKD1 polynucleotide
 CC in a sample, for identifying a subject at risk for a PKD1-associated
 CC disorder such as autosomal dominant polycystic kidney disease (ADPKD) or
 CC acquired cystic disease and for diagnosing a PKD1-associated disorder in
 CC a subject. They are useful for selectively amplifying a region of a PKD1
 CC gene. PKD1 DNA fragments are useful for detecting the presence of a mutant
 CC PKD1 polynucleotide in a sample, as a probe for an amplification
 CC reaction, in hybridisation or amplification assays of biological samples
 CC to detect abnormalities of PKD1 expression and for engineering transgenic
 CC animals. The present sequence is a PCR primer used to detect mutation in
 CC human PKD1 gene

 XX Determining the presence of a CYP2D6 target sequence in a DNA sample
 PT containing CYP2D6 nucleic acid, for detecting mutations or polymorphisms,
 PT comprises detecting the scattered light from a particle bound to the
 PT target sequence.
 XX
 XX Claim 14; Page 50; 66pp; English.
 PS
 XX The invention relates to a method of determining the presence or absence
 CC of a CYP2D6 target sequence in a DNA sample containing CYP2D6 nucleic
 CC acid. Determining the presence or absence of a CYP2D6 target sequence in
 CC a sample of DNA containing CYP2D6 nucleic acid comprises contacting the
 CC nucleic acid with a probe under stringent binding conditions, and
 CC detecting the presence or absence of the target sequence bound with the
 CC probe with a scattered light detectable particle, by observing light
 CC scattered from the particle which indicates the presence of the target
 CC sequence. The method is useful for determining the presence or absence of
 CC particular single nucleotide polymorphisms or alleles in genomic nucleic
 CC acid, especially in a pharmacogenetically relevant gene or genes in a DNA
 CC sample, and to detect and measure one or more target sequences in a
 CC sample. The method may also be used to detect specific mutations to
 CC identify the phenotypic classification of an individual. ABK30162-
 CC ABK30230 represent CYP2D6 target sequence-specific primers of the
 CC invention

XX
XX New double-stranded interfering nucleic acid, useful e.g. for treatment
PT and diagnosis of cancer, downregulates the vascular endothelial growth
PT factor receptor gene.
XX
XX Example 3; SEQ ID NO 1924; 207pp; English.
XX
XX The present invention describes a double-stranded short interfering
CC nucleic acid (siNA) that downregulates expression of the vascular
CC endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC that express siNA; and (5) single-stranded siNA with similar properties.
CC The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC gynaecological activities. The siNA are useful for modulating
CC (downregulating) the expression of VEGFR genes. The siNA are potentially
CC useful for treating a wide range of angiogenesis-associated conditions,
CC particularly cancers, diabetic retinopathy, macular degeneration,
CC neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC drug screening, target identification and validation, genetic
CC engineering, studying gene function, and also for gene mapping (e.g. of
CC single-nucleotide polymorphisms). The present sequence is used in the
CC exemplification of the present invention.

DR
XX Analyzing mutations of a target nucleic acid by detecting heteroduplexes

PT from generated duplexes, useful for diagnosing patients affected with
PT polycystic kidney disease.
XX
XX Disclosure; SEQ ID NO 83; 126pp; English.
XX
XX The invention relates to a novel method of mutation analysis of a target
CC nucleic acid which comprises incubating a sample having the target
CC nucleic acid in a reaction mixture, in the presence of at least one first
CC and second nucleic acid, where incubation produces amplified products,
CC generating duplexes in the amplified products and detecting the presence
CC or absence of a heteroduplex from the duplexes, where its presence
CC indicates a potential mutation in the target nucleic acid and its absence
CC indicates the absence of mutation in the target nucleic acid. The method
CC and compositions of the invention may be useful for analysing mutation
CC and diagnosing patients affected with PKD (polycystic kidney disease).
CC The current sequence is that of a PCR primer of the invention which was
CC used to amplify human polycystic kidney disease PKD-1 DNA.

XX Novel nucleic acid obtained from 4 synthesis-period of neuroblastoma
PT cells useful for prognosing and determining progress stage of
PT neuroblastomas.
XX
XX Claim 8; SEQ ID NO 602; 455pp; Japanese.
XX
XX The present invention relates to human nucleic acid sequences (I;
CC ADO15739-ADO15912) obtained from 4 synthesis-period (stage 4S) of
CC neuroblastoma cell. (I) is useful for prognosing and determining the
CC progress stage of 4 synthesis-period of neuroblastoma. The present
CC sequence is a primer, used to illustrate the invention.

XX PT Selecting siRNA by selecting an siRNA molecule of 19-25 nucleoside bases
PT by selecting a target gene and measuring the functionality of the
PT nucleotide sequences that are complementary to a stretch of nucleotides
PT of the target sequence.
XX PS Example 12; SEQ ID NO 611; 199pp; English.
XX CC The invention relates to a novel method for selecting siRNA (short
CC interfering RNA) comprising selecting an siRNA molecule of 19-25
CC nucleoside bases by selecting a target gene and measuring the
CC functionality of sequences of 19-25 nucleotides in length that are
CC substantially complementary to a stretch of nucleotides of the target
CC sequence, where the functionality is dependent upon non-target specific
CC criteria. Also claimed are methods for gene-silencing, developing an
CC siRNA algorithm for selecting siRNA, selecting an siRNA with improved
CC functionality, selecting hyperfunctional siRNA, an siRNA molecule
CC effective at silencing Bcl-2, and a kit for gene silencing comprising the
CC siRNA. The siRNA molecule comprises a sequence substantially similar to a
CC sequence consisting of GGAGAUAGUGAUGAAGUA; GAAGACUCUGCCAGUUU;
CC GUACACACCGGAGUA; AGAUGAUGAUGAUGAUAU; UGAAGACUCUGCCAGUUU;
CC CAUGGCCUCUGUUUGA; UCGGCCUCUGUUUGA; GAGAUAUGAUGAUGAUAU;
CC GGAGAUAGUGAUGAUAU; and GAAGACUCUGCCAGUUU. The siRNA molecule
CC comprises a sense strand and an anti-sense strand. The siRNA molecule
CC comprises a hairpin. The siRNA molecule comprises between 18 and 30 base
CC pairs. The kit comprises at least two siRNA, comprising a first optimised
CC siRNA and a second optimised siRNA. The method is useful in selecting
CC siRNA for generating a gene silencing reagent. The present sequence is
CC used in the exemplification of the invention. The sequence is shown in
CC the specification as DNA, but described as siRNA.

XX PT Novel nucleic acid comprising specific sequence capable of detecting
PT mutations in polycystic kidney disease-1 (PKD-1) or PKD-2 gene, useful
PT for detecting biomarkers of autosomal dominant polycystic kidney disease.
XX PS Disclosure; Page 41; 195pp; English.
XX CC The invention relates to a novel isolated nucleic acid capable of
CC detecting mutations in polycystic kidney disease (PKD-1) or PKD-2 gene,
CC comprising a specific sequence. The invention further comprises: a
CC nucleic acid biomarker for autosomal dominant polycystic kidney disease
CC (ADPKD), comprising a PKD-1 or PKD-2 nucleic acid sequence having one or
CC more novel nucleotide alterations chosen from identified ADPKD associated
CC alterations, as given in the specification; a polypeptide biomarker for
CC ADPKD, comprising a PKD-1 or PKD-2 polypeptide sequence having one or
CC more novel amino acid alterations chosen from identified ADPKD associated
CC alterations, as given in the specification; a method for diagnosing ADPKD
CC in an individual; and a method for determining in an individual the
CC presence or absence of a mutant PKD gene. The PKD mutation detecting
CC isolated nucleic acid or the ADPKD nucleic acid biomarker is useful in
CC diagnosing ADPKD in an individual, or determining the presence or absence
CC of a mutant PKD gene in an individual. This polynucleotide sequence
CC represents a human polycystic kidney disease specific primer used in the
CC detection method of the invention.

XX
XX Ribozymes having modified bases and methods for producing them - for use
PT in inhibiting disease related genes.
XX
XX Claim 2; Page 204; 407pp; English.
XX
CC The present sequence represents a preferred target sequence for an
CC enzymatic nucleic acid (i.e. a ribozyme) which cleaves ICAM-1 mRNA at the
CC nucleotide base position indicated in the DE line. Regions of the mRNA
CC that do not form secondary folding structures and that contain potential
CC hammerhead and hairpin ribozyme cleavage sites were identified by
CC computer analysis. Ribozymes directed against these mRNA sequences were
CC designed and synthesised with modifications that improve their nucleic
CC resistance. The ribozymes cleave the ICAM-1 target sequences and thereby
CC inhibit ICAM-1 expression, making them useful for reducing transplant
CC rejection and alleviating symptoms in patients with rheumatoid arthritis,
CC asthma and other inflammatory disorders. (Updated on 25-MAR-2003 to
CC correct PI field.)

 XX
 XX Identifying new catalytic nucleic acid that modulates selected processes
 PT - especially ribozymes that cleave Raf RNA for treating cancer,
 PT restenosis, and also new ribozymes and modified nucleoside triphosphates
 PT used as antiviral agents and synthons.
 XX
 PS Claim 177; Page 160; 259pp; English.
 XX
 CC A method has been developed for the identification of a nucleic acid
 CC capable of modulating a process in a biological system. The method
 CC comprises: (a) introducing into the system a random library of nucleic
 CC acid catalysts (NAC) having a substrate binding domain (SBD), comprising
 CC a random sequence, and a catalytic domain (CD); and (b) identifying NAC
 CC in systems where modulation has occurred and/or determining the sequence
 CC of at least part of the SBDs in such systems. Nucleic acid molecules with
 CC endonuclease activity and catalytic activity, from the present invention,
 CC are used to modulate gene expression in plant and mammalian cells and to
 CC cleave target nucleic acid, particularly for treating systemic diseases
 CC caused by specific RNA, e.g. cancer, inflammation, psoriasis, non-hepatic
 CC ascites and infection. They may also be used to detect genetic drift and
 CC mutations in diseased cells and to determine c-rat RNA. Specifically NACs
 CC with RNA-cleaving activity that modulate expression of the Raf gene, are
 CC used to treat cancer, restenosis, psoriasis or rheumatoid arthritis, or
 CC generally any condition associated with the level of c-rat. Introduction
 CC of sugar/phosphate modifications increases stability against nuclease and
 CC activity. AAV90922 to AAV93877 represent NACs that can be used in the
 CC method, specifically for modulating the expression of a Raf gene

PT useful for inhibiting tumor angiogenesis in cell, and for treating
PT cancer.
XX
XX Disclosure; SEQ ID NO 822; 172pp; English.
XX
XX The invention relates to enzymatic nucleic acids (I) i.e.
CC ribozymes/DNAzymes/zinzymes that target and modulate expression of, genes
CC encoding vascular endothelial growth factor (VEGF) and/or VEGF receptor
CC (VEGFR1 and 2 encode by the Flt-1 and Kdr genes respectively). Also
CC included are a composition comprising (I) and a carrier, administering
CC (I) to a cell (by contacting the cell with the compound under conditions
CC suitable for the administration), administering (I) to a cell (in
CC conjunction with one or more other drug by contacting the cell with the
CC compound and the other drug under conditions suitable for the
CC administration), administering (I) to a mammal (by contacting the mammal
CC with the compound under conditions suitable for the administration),
CC treating (M1) a subject having endometriosis (by contacting a subject
CC with, or administering to subject, a nucleic acid molecule (II) that
CC modulates expression of VEGF, VEGFR1, and/or VEGFR2), a mammalian cell
CC (III) comprising (I) and administering to a mammal (I) (in conjunction
CC with a chemotherapeutic agent comprising contacting the mammal with the
CC compound and the chemotherapeutic agent under conditions suitable for the
CC administration). (I) is administered to a mammalian cell, preferably
CC human cell in the presence of a delivery reagent which is a lipid such as
CC cationic lipid or phospholipid, or a liposome. The enzymatic nucleic acid
CC molecule has an endonuclease activity to cleave RNA encoded by an VEGFR1
CC and/or VEGFR2 gene, and is in a hammerhead, inozyme, DNazyme, G-cleaver,
CC or Amberzyme configuration. The enzymatic nucleic acids are useful for
CC inhibiting ocular angiogenesis associated with diabetic retinopathy or
CC age-related diabetic retinopathy, in a subject. They are also useful for
CC inhibiting angiogenesis, preferably tumor angiogenesis in cell, and for
CC treating a subject having a condition associated with an increased level
CC of VEGF receptor, where the condition is cancer, e.g. breast cancer, lung
CC cancer (such as non-small cell lung carcinoma), colorectal cancer, renal
CC cancer (such as renal cell carcinoma), pancreatic cancer. The enzymatic
CC nucleic acids are useful for treating a subject (preferably human) having
CC endometriosis, psoriasis, age-related macular degeneration, proliferative
CC diabetic retinopathy, hypoxia-induced angiogenesis, rheumatoid arthritis,
CC wound healing, endometrial carcinoma, gynecologic bleeding disorders,
CC irregular menstrual cycles, ovulation, premenstrual syndrome, and
CC menopausal dysfunction. The enzymatic nucleic acids are useful for birth
CC control by inhibiting ovulation or embryonic uterine implantation. The
CC present sequence is a target sequence from the human VEGFR1/flt-1 mRNA.

XX Novel myosin-like protein-1, useful for treating or preventing disorder
 PT associated with decreased expression or activity of human genome-derived
 PT myosin-like protein-1 such as disorder of heart and/or skeletal muscle
 PT function.

XX Disclosure; SEQ ID NO 1653; Opp; English.

XX The invention relates to a novel polypeptide (I) comprising a sequence
 CC (S1) of myosin-like protein-1 (hGDMPLP-1) having 2568 amino acids fully
 CC defined in the specification, a fragment of at least 8 amino acids of
 CC (S1), 95% deviation from (S1) which are conservative substitutions, and
 CC 55% identity to (S1). A polypeptide of the invention acts as a agonist or
 CC antagonist of hGDMPLP-1, or as an inhibitor of hGDMPLP-1 activity. A
 CC pharmaceutical composition of the invention is useful for treating or
 CC preventing a disorder associated with decreased expression or activity of
 CC hGDMPLP-1, such as a disorder of heart and/or skeletal muscle function.
 CC The present sequence represents a 17-mer nucleotide, used in the
 CC invention for scanning the sequence represented in ACN63102

XX
XX Measuring the expression or activity of a CYP enzyme in a subject by
PT measuring the expression of the CYP enzyme gene or mRNA expression for
PT the CYP enzyme in whole blood and normalizing the measured CYP enzyme
PT gene or mRNA expression.
XX
XX Example 5; SEQ ID NO 51; 73pp; English.
XX
XX The invention relates to a novel method for measuring the expression or
CC activity of a CYP (cytochrome P450), NAT1 (N-acetyltransferase 1) or NAT2
CC (N-acetyltransferase 2) enzyme in a subject comprising measuring the
CC expression of the enzyme gene or mRNA in whole blood and normalising the
CC measured enzyme gene or mRNA expression, respectively. The method may be
CC useful in measuring the expression or activity of an enzyme in a subject
CC and for detecting and quantifying the presence of SNPs (single nucleotide
CC polymorphisms) within an enzyme. Thus, the method of the invention may be
CC utilised in order to predict the effectiveness or safety of a drug
CC therapy, since the drug metabolising capability of an individual is
CC affected by the isoenzymes present within that individual. The current
CC sequence is that of a 5' biotinylated PCR primer which was used to
CC amplify human CYP2D6 (debrisoquine 4-hydroxylase) DNA of the invention.

XX PT and diagnosis of cancer, downregulates the vascular endothelial growth
XX PT factor receptor gene.
XX
XX Example 3; SEQ ID NO 895; 207pp; English.
XX
XX The present invention describes a double-stranded short interfering
XX CC nucleic acid (siNA) that downregulates expression of the vascular
XX CC endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
XX CC siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
XX CC delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
XX CC that express siNA; and (5) single-stranded siNA with similar properties.
XX CC The siNAs have antiangiogenic, cytostatic, antidiabetic,
XX CC ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
XX CC gynaecological activities. The siNA are useful for modulating
XX CC (downregulating) the expression of VEGFR genes. The siNA are potentially
XX CC useful for treating a wide range of angiogenesis-associated conditions,
XX CC particularly cancers, diabetic retinopathy, macular degeneration,
XX CC neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
XX CC and polycystic kidney disease. The siNA may also be useful for diagnosis,
XX CC drug screening, target identification and validation, genetic
XX CC engineering, studying gene function, and also for gene mapping (e.g. of
XX CC single-nucleotide polymorphisms). The present sequence is used in the
XX CC exemplification of the present invention.

 XX Selecting siRNA by selecting an siRNA molecule of 19-25 nucleoside bases
 PT by selecting a target gene and measuring the functionality of the
 PT nucleotide sequences that are complementary to a stretch of nucleotides

PT of the target sequence.
 XX
 PS Example 1; SEQ ID NO 51; 199pp; English.
 XX
 CC The invention relates to a novel method for selecting siRNA (short
 CC interfering RNA) comprising selecting an siRNA molecule of 19-25
 CC nucleoside bases by selecting a target gene and measuring the
 CC functionality of sequences of 19-25 nucleotides in length that are
 CC substantially complementary to a stretch of nucleotides of the target
 CC sequence, where the functionality is dependent upon non-target specific
 CC criteria. Also claimed are methods for gene-silencing, developing an
 CC siRNA algorithm for selecting siRNA, selecting an siRNA with improved
 CC functionality, selecting hyperfunctional siRNA, an siRNA molecule
 CC effective at silencing Bcl-2, and a kit for gene silencing comprising the
 CC siRNA. The siRNA molecule comprises a sequence substantially similar to a
 CC sequence consisting of GGGAGUAGUGAUGAGUA; GAAGUACAUCCAUUAUAG;
 CC GUACGACACCCGGGAUA; AGAUGAUGAUGAUGAUAU; UGAAGACUCUGCCAGUUU;
 CC AUGCGCCUCUGUUGA; UCGCGCCUCUGUUGA; and GAGAUUGAUGAUGAUA;
 CC GAGAUUGAUGAUGAUA; and GAGACUCUGCAGUUUG. The siRNA molecule
 CC comprises a sense strand and an anti-sense strand. The siRNA molecule
 CC comprises a hairpin. The siRNA molecule comprises between 18 and 30 base
 CC pairs. The kit comprises at least two siRNA, comprising a first optimised
 CC siRNA and a second optimised siRNA. The method is useful in selecting
 CC siRNA for generating a gene silencing reagent. The present sequence is
 CC used in the exemplification of the invention.

XX Interference RNA agent useful for treating dyslipidemias, coronary artery
PT disease, diabetes, cancer or neurological disease, comprises sense
PT sequence and antisense sequence which has specific modifications.
XX
PS Example 5; SEQ ID NO 4349; 378pp; English.
XX
CC The invention describes a RNA interference (iRNA) agent (I) comprising a
CC sense sequence and an antisense sequence, where the sense sequences have
CC one or more asymmetrical 2'-O alkyl modifications, the antisense
CC sequences have one or more asymmetrical phosphorothioate modifications
CC and the antisense sequence targets a human gene sequence. Also described
CC are: a pharmaceutical preparation comprising (I); reducing (M1) apob-100
CC levels or glucose-6-phosphatase levels in a subject; producing (I);
CC stabilising (I), involves selecting a sequence with activity and
CC introducing one or more asymmetrical modification in the sequence, where
CC the modification decreases nuclease sensitivity while not decreasing its
CC activity; a kit comprising (I) and instruction for its use; and a device
CC that can be dispense or administer a composition comprising (I). (I) is
CC useful for reducing apob-100 levels or glucose-6-phosphatase levels. (M1)
CC is useful for reducing apob-100 levels or glucose-6-phosphatase levels.
CC The subject is suffering from a disorder characterised by elevated or
CC otherwise unwanted expression of apob-100, elevated or otherwise unwanted
CC levels of cholesterol, and/or dysregulation of lipid metabolism. The
CC disorder is chosen from the HDL/LDL cholesterol imbalance,
CC dyslipidemias, hypercholesterolaemia, statin-resistant
CC hypercholesterolaemia, coronary artery disease (CAD), coronary heart
CC disease (CHD) and atherosclerosis. (I) is administered to a subject to
CC inhibit hepatic glucose production or for treating glucose-metabolism-
CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
CC treating the diseases as mentioned above, cancer (e.g. breast, colon or
CC lung cancer), neurological disease (e.g., Huntington disease or
CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
CC represents a human apolipoprotein B (ApoB) antisense oligonucleotide that
CC can be used to control ApoB gene expression.

 DR
 XX
 XX Interference RNA agent useful for treating dyslipidemias, coronary artery
 PT disease, diabetes, cancer or neurological disease, comprises sense
 PT sequence and antisense sequence which has specific modifications.
 XX
 XX Example 5; SEQ ID NO 1395; 378pp; English.
 XX
 CC The invention describes a RNA interference (iRNA) agent (I) comprising a
 CC sense sequence and an antisense sequence, where the sense sequences have
 CC one or more asymmetrical 2'-O alkyl modifications, the antisense
 CC sequences have one or more asymmetrical phosphorothioate modifications
 CC and the antisense sequence targets a human gene sequence. Also described
 CC are: a pharmaceutical preparation comprising (I); reducing (MI) apoB-100
 CC levels or glucose-6-phosphatase levels in a subject; producing (I);
 CC stabilising (I), involves selecting a sequence with activity and
 CC introducing (I) or more asymmetrical modification in the sequence, where
 CC the modification decreases nuclease sensitivity while not decreasing its
 CC activity; a kit comprising (I) and instruction for its use; and a device
 CC that can be dispense or administer a composition comprising (I). (I) is
 CC useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (MI)
 CC is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.
 CC The subject is suffering from a disorder characterised by elevated or
 CC otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
 CC levels of cholesterol, and/or dysregulation of lipid metabolism. The
 CC disorder is chosen from the HDL/LDL cholesterol imbalance,
 CC dyslipidaemias, hypercholesterolaemia, statin-resistant
 CC hypercholesterolaemia, coronary artery disease (CAD), coronary heart
 CC disease (CHD) and atherosclerosis. (I) is administered to a subject to
 CC inhibit hepatic glucose production or for treating glucose-metabolism-
 CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
 CC treating the diseases as mentioned above, cancer (e.g. breast, colon or
 CC lung cancer), neurological disease (e.g., Huntington disease or
 CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
 CC represents a human apolipoprotein B (apoB) antisense oligonucleotide that
 CC can be used to control ApoB gene expression.

Raimundo S, Zanger U;

WPI; 2005-161644/17.

Novel polynucleotide of molecular variants of Cytochrome P450 2D6 (CYP2D6) gene, capable of hybridizing to CYP2D6 gene, is useful in diagnosing disease related to presence of molecular variant of CYP2D6 gene.

Example 1; SEQ ID NO 19; 33pp; English.

The invention relates to a polynucleotide (I) of molecular variants of CYP2D6 gene, chosen from polynucleotide capable of hybridizing to CYP2D6 gene, where the polynucleotide consists of substitution of one or more nucleotides at position corresponding to 4784, 4735 or 4087 of the CYP2D6 gene having a fully defined sequence (S1) of 9609 base pairs as given in the specification. (I) is useful for identifying a diagnostic composition, which involves (a) isolating (I) from several subgroups of individuals, where one subgroup has no prevalence for CYP2D6 associated disease, and one or more further subgroup(s) do have prevalence for a CYP2D6 associated disease, and (b) identifying a single nucleotide polymorphism by comparing the nucleic acid sequence of the polynucleotide or the gene of one subgroup having no prevalence for a CYP2D6 associated disease, with one or more further subgroup(s) having a prevalence for a CYP2D6 associated disease. (I) is useful for diagnosing a disease related to the presence of a molecular variant of a CYP2D6 gene or susceptibility to such a disorder, which involves determining the presence of (I) in a sample from a subject. (I) is useful for diagnosing whether a subject has EM, IM or PM phenotype, and for determining whether an individual is at risk for a toxic reaction, non-response, insufficient response, or reduced metabolic activity of CYP2D6 to treatment with a CYP2D6 substrate. (I) is useful in selecting a subject suffering from a CYP2D6 substrate treatable disease for treatment with the substrate, and in treating a subject suffering from a CYP2D6 substrate treatable disease. (I) is useful for detecting variant polynucleotide of CYP2D6 gene in a sample, which involves contacting (I) with the sample under conditions allowing interaction of variant of CYP2D6 gene with several immobilized targets on (I), and determining the binding of the polynucleotide or the gene to the immobilized targets on (I). (I) is useful for diagnosing a disease, which involves binding of the variant polynucleotide of CYP2D6 gene or the gene to the immobilized targets on (I), where the binding indicates the presence or the absence of the disease or a prevalence for the disease. The disease is codeine dependence, depression, hepatitis C, psychosis, schizophrenia or Parkinson's disease. (I) is useful for diagnosing an altered activity of the CYP2D6 enzyme, and for diagnosing a polynucleotide associated with IM phenotype of CYP2D6. (I) is useful in diagnosing individual's genetic constitution of the CYP2D6 status, useful in personalized medicine. (I) is used for prediction of the therapeutic outcome of an individual with an established drug and for avoidance of side effects/toxicity due to altered activity of CYP2D6 mediated by different CYP2D6 alleles. (I) is useful as forensic markers. This sequence corresponds to a PCR primer to amplify the exon 6 region of the CYP2D6 gene for detection polymorphisms.

PT Determining whether a test compound inhibits tyrosine kinase activity in
PT a mammal by exposing the mammal to the test compound and measuring in the
PT mammal the level of at least one of the measured proteins or mRNA
PT transcripts.
XX
PS Example K; SEQ ID NO 42; 408pp; English.
XX
XX The invention relates to a novel method for determining whether a test
CC compound inhibits tyrosine kinase activity in a mammal comprising
CC measuring in the mammal the level of at least one of the proteins and/or
CC mRNA transcripts or genes for such proteins comprising type 1 plasminogen
CC activator inhibitor (PAI-1), TIMP-1 (tissue inhibitor of
CC metalloproteinase 1), vinculin, vascular endothelial growth factor
CC (VEGF), placental growth factor (PLGF), VEGF/PLGF heterodimers or
CC migration inhibitory factor (MIG), exposing the mammal to the test
CC compound and then measuring in the mammal the level of at least one of
CC the proteins and/or mRNA transcripts previously measured. The method of
CC the invention may be useful for determining whether a test compound
CC inhibits tyrosine kinase activity in a mammal. The current sequence is
CC that of the Tagman probe which was used in the exemplification of the
CC invention.

XX
XX New polypeptide, for raising antibodies that recognize hGDMPLP-1 proteins,
PT or as specific biomolecule capture probes for surface-enhanced laser
PT desorption ionization, comprises human myosin-like protein hGDMPLP-1.
XX
XX Disclosure; SEQ ID NO 1652; 214pp; English.
XX
XX The present invention describes a human genome-derived myosin-like
CC protein 1 (hGDMPLP-1). The protein and polynucleotide sequences of hGDMPLP-
CC 1 can be used in gene therapy and vaccine production. The hGDMPLP-1
CC nucleic acids can be used as probes to detect, characterize and quantify
CC hGDMPLP-1 nucleic acids in samples, as amplification substrates, to
CC provide initial substrates for the recombinant engineering of hGDMPLP-1
CC protein variants having desired phenotypic improvements, and for
CC expressing the proteins. The hGDMPLP-1 proteins or polypeptides may be
CC used as immunogens to raise antibodies that specifically recognise hGDMPLP
CC -1 proteins, as standards in assays used to determine the concentration
CC and/or amount specifically of hGDMPLP proteins, as specific biomolecule
CC capture probes for surface-enhanced laser desorption/ionisation, as
CC therapeutic supplement in patients having specific deficiency in hGDMPLP-1
CC production, and in vaccines or for replacement therapy. The
CC polynucleotide sequences encoding hGDMPLP-1 may be used for diagnosing a
CC disorder associated with the expression of hGDMPLP-1, in particular heart
CC and skeletal muscle disorders. hGDMPLP-1 is localised to chromosome 22.
CC The present sequence represents an oligomer used in the screening of the
CC hGDMPLP-1 sequence in the exemplification of the present invention. N.B.
CC The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequence

XX Novel isolated polypeptide A40926, comprising polypeptide sequence or

PT open reading frame polypeptide involved in biosynthetic pathway of

PT A409626, useful for synthesizing glycopeptide antibiotic A409626.

XX Example 1; Page 16; 164pp; English.

XX This sequence is a primer which as used in the amplification of a probe

CC which was used in the isolation of the dbv gene cluster from *Nonomura*

CC sp. ATCC39727 (formerly *Actinomyces* sp. ATCC39727). The 37 proteins

CC encoded by the dbv gene cluster are involved in the biosynthesis of the

CC glycopeptide A40926. dbv ORF 1, 2, 5, and 37 encode polypeptides required

CC for the synthesis of 4-hydroxy-phenylglycine residues of A40926. dbv ORF

CC 30-34 and 37 encode polypeptides required for the synthesis of 3, 5-

CC dihydroxy-phenylglycine residues of A40926. dbv ORF 16, 17, 25, 26 and 36

CC encode polypeptides required for the synthesis of heptapeptide skeleton

CC of A40926. dbv ORF 10 encodes polypeptide required for the chlorination

CC of the aromatic residues of A40926. dbv ORF 28 encodes a polypeptide

CC required for the beta-hydroxylation of the tyrosine residue of amino acid

CC 6 of A40926. dbv ORF 11-14 encode polypeptides required for cross-linking

CC of the aromatic residues of amino acids at positions 2 and 4, 4 and 6, 1

CC and 3, and 5 and 7 of A40926. dbv ORF 9, 23 and 29 encode polypeptides

CC required for addition and formation of N-acetyl glucosamine residue of

CC A40926. dbv ORF 20 or 27 encode polypeptides required for the attachment

CC of mannose residues or N-methylation of A40926. dbv ORF 7, 18, 19, 24

CC and 35 encode polypeptides required for the export of A40926 or its

CC precursors. dbv ORF 3, 4, 6, and 22 encode polypeptides required for

CC regulating the expression of one or more genes of the dbv gene cluster.

CC The dbv gene cluster and the proteins encoded by it are useful for

CC producing glycopeptide antibiotic A40926 or its precursor.

CC The invention relates to a novel polypeptide (I) comprising a sequence

CC (SI) of myosin-like protein-1 (hGDMPLP-1) having 2568 amino acids fully

CC defined in the specification, a fragment of at least 8 amino acids of

CC (SI), 95% deviation from (SI) which are conservative substitutions, and

CC 6% identity to (SI). A polypeptide of the invention acts as a agonist or

CC antagonist of hGDMPLP-1, or as an inhibitor of hGDMPLP-1 activity. A

CC pharmaceutical composition of the invention is useful for treating or

CC preventing a disorder associated with decreased expression or activity of

CC hGDMPLP-1, such as a disorder of heart and/or skeletal muscle function.

CC The present sequence represents a 17-mer nucleotide, used in the

CC invention for scanning the sequence represented in ACN63102

 PT Novel open reading frame polypeptide involved in biosynthetic pathway of
 PT teicoplanin, useful for producing glycopeptide antibiotic teicoplanin.
 XX
 PS Example 1; SEQ ID NO 44; 175pp; English.
 XX
 CC This sequence represents a primer which was used in the amplification of
 CC the probe dp9A. The amplified probe was used in the isolation of the tcp
 CC gene cluster which is involved in the biosynthesis of the glycopeptide
 CC teicoplanin. The isolated tcp sequence consists of 39 ORFs. Teicoplanin
 CC is a complex of closely related glycopeptide antibiotics produced by A.
 CC teichomyceticus. The tcp cluster is characterised by the presence of
 CC several ORFs that do not find homologues in the bal, cep, com and sta
 CC clusters. The glycopeptides encoded by the tcp cluster are useful for
 CC producing glycopeptide antibiotic teicoplanin. Fragments of the tcp
 CC cluster may be used for synthesizing 4-hydroxy-phenylglycine residues of
 CC teicoplanin, 3,5-dihydroxy-phenylglycine residue, heptapeptide skeleton
 CC of teicoplanin, for cross-linking of the aromatic residues of amino acids
 CC of teicoplanin, for the addition and formation of the two N-acyl-beta-D-
 CC glucosamine residues to the core structure of teicoplanin, for exporting
 CC teicoplanin or some of its precursors outside of the cytoplasm and for
 CC conferring resistance to teicoplanin to the producing strain, for
 CC regulating the expression of one or more genes of the tcp gene cluster,
 CC for the chlorination of the aromatic residues of amino acids of
 CC teicoplanin, for alpha-hydroxylation of the tyrosine residue of amino
 CC acid of teicoplanin, for attaching mannosyl residue of teicoplanin, and
 CC for the synthesis of teicoplanin.

PT stability - useful for treating e.g. tumour angiogenesis, psoriasis,
PT rheumatoid arthritis, etc., in a human patient.
XX
XX Claim 4; Page 94; 218pp; English.
XX
XX The present invention describes nucleic acid molecules which modulate the
CC synthesis, expression and/or stability of a mRNA encoding 1 or more
CC receptors of vascular endothelial growth factor (VEGF). A patient
CC (preferably human) having a condition associated with the level of the
CC fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing
CC receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour
CC angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be
CC treated by administering the nucleic acid molecule or the expression
CC vector to the patient. AAX67275 to AAX75752 represent specific examples
CC of nucleic acid molecules from the present invention

XX Claim 15; Page 94; 310pp; English.
XX
CC AAX09121-X10268 are allele-specific oligonucleotide primers used in the
CC isolation of various biallelic polymorphic markers found in the human
CC genome (represented in AAX10269-X1937). These primers can be used in a
CC method for determining polymorphic forms in an individual for use in e.g.
CC forensics, paternity testing or for phenotypic typing for diseases such
CC as agammaglobulinemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular
CC dystrophy, Wiskott-Aldrich syndrome, Fabry's disease, familial

CC hypercholesterolemia, polycystic kidney disease, hereditary
 CC spherocytosis, von Willebrand's disease, tuberous sclerosis, hereditary
 CC haemorrhagic telangiectasia, familial colonic polyposis, Ehlers-Danlos
 CC syndrome, osteogenesis imperfecta, acute intermittent porphyria,
 CC autoimmune diseases, inflammation, cancer, diseases of the nervous
 CC system, infection by pathogenic microorganisms, and characteristics such
 CC as longevity, appearance (e.g. baldness, obesity), strength, speed,
 CC endurance, fertility, and susceptibility or receptivity to particular
 CC drugs or therapeutic treatments. The isolated polymorphic nucleic acid
 CC segments can also be used to produce medicaments for the treatment or
 CC prophylaxis of such diseases

Antisense oligonucleotides useful for inhibiting the expression of the human RhoG gene.

Claim 3; Col 27; 24pp; English.

AAZ25553 to AAZ25582 represent specifically claimed antisense oligonucleotides targeted to, and capable of inhibiting the expression of nucleic acids encoding human RhoG. RhoG is a member of the Rho subfamily of small GTPases the expression of which is associated with the induction of mitosis by mitogens. RhoG is thought to be required for entry into the DNA synthesis step of the cell cycle. It also effects the dynamic organisation of the actin cytoskeleton which regulates changes during cell cycle progression (e.g. cell rounding and pinching off during mitosis) and with determining the density to which cells will proliferate (RhoG affects an actin-dependent signal transduction pathway mediating the level of contact inhibition through surface signals). Additionally, RhoG is associated with the development of cancers (RhoG participates in a signalling pathway involving ras-mediated transformation). Antisense compounds from the present invention may be used for inhibiting the expression of human RhoG in cells and tissues in vitro and may be used diagnostically to determine the role of RhoG in various biochemical pathways (e.g. its role in mitosis, the organisation of the actin cytoskeleton and in cancer development)

XX The specification describes antisense oligonucleotides (AA52869-X55271)
CC directed against at least 2 mRNAs selected from target genes, coding and
CC non-coding regions of RNAs corresponding to target genes, gene initiation
CC codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-
CC end and the juxta-section between coding and non-coding regions and all
CC segments of RNAs encoding proteins associated with one or more diseases,
CC conditions or mixtures. The antisense oligonucleotides may be derived
CC from sequences AA55272-74. These multiple target oligonucleotides
CC (specifically AA55180-271) can be used for the antisense treatment of
CC diseases and conditions. Typical diseases and conditions are those
CC associated with impaired respiration and inflammation, including lung
CC diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,
CC acute asthma, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, pulmonary hypertension,
CC pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary
CC disease (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g.
CC colon cancer, breast cancer, lung cancer, pancreatic cancer,
CC hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, as
CC well as all types of cancers which may metastasize or have metastasized
CC to the lungs, including breast and prostate cancer

XX New antisense oligonucleotides useful for treating e.g. pulmonary
PT vasoconstriction, inflammation, allergies, asthma, hypertension,
PT bronchitis, emphysema, respiratory distress syndrome, ischemia or
PT cancers.
XX Disclosure; Page 556; 1343pp; English.
XX The present invention describes a new composition comprising an antisense
CC oligonucleotide (ON) with low adenosine (up to 15%), which targets
CC nucleic acids involved in bronchoconstriction, allergies, and/or
CC inflammation. The ON can have antiinflammatory, antiallergic,
CC antisthmatic, cytosstatic and analgesic activities. The compositions are
CC useful for the treatment of diseases associated with inflammation,
CC impaired airways, including lung disease and diseases whose secondary
CC effects afflict the lungs of a subject. They can be used for treating
CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,
CC impeded respiration, respiratory distress syndrome, pain, cystic
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive
CC pulmonary disease (COPD), and cancers such as leukemias, lymphomas,
CC carcinomas, and cancers which may metastasize to the lungs, including
CC breast and prostate cancer. The reduction of the adenosine content of
CC ONs reduces side effects. The A-containing ONs break down with the
CC release of deoxyadenosine which activates adenosine receptors causing
CC bronchoconstriction and inflammation. AAA32313 to AAA3512 represent the
CC nucleotide sequences given in the sequence listing from the present
CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185
CC sequences are also called SEQ ID NO:1 to 185, but the sequences differ
CC from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to
CC AAA33992) are specifically claimed ONs from the present invention. N.B.

 PT and respiratory obstructions.
 PT
 XX
 PS Disclosure; Page 297; 1592pp; English.

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system peptide transmitters, defensins, growth factors, vasoactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction

CC and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or
 CC surfactant hypoproduction which are associated with a disease or
 CC condition selected from pulmonary vasoconstriction, inflammation,
 CC allergies, asthma, impeded respiration, respiratory distress syndrome
 CC (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease (COPD),
 CC pulmonary transplantation rejection, pulmonary infections, bronchitis,
 CC and/or cancer. AAF18434 to AAF21543 represent human polynucleotide
 CC fragments and antisense oligonucleotides used in the exemplification of
 CC the present invention

 PS Claim 3; Page 84; 144pp; English.

The invention relates to antisense compounds, especially oligonucleotides, which are targeted to a nucleic acid encoding inducible nitric oxide synthase and which specifically hybridise to and modulate expression of inducible nitric oxide synthase. The antisense compounds

CC have immunomodulator, antidiabetic, cardiovascular, cardiac,
CC neuroprotective, disorder and vasotropic activity. The antisense
CC oligonucleotides are useful for inhibiting the expression of inducible
CC nitric oxide synthase in cells or tissues. In particular, the antisense
CC oligonucleotides are useful for treating diseases or disorders associated
CC with inducible nitric oxide synthase, e.g. diabetes, immunological
CC disorder, cardiovascular disorder, neurological disorder or
CC ischaemia/reperfusion injury. The antisense oligonucleotides are also
CC useful for research and diagnostics. The present sequence is that of an
CC antisense 2'-O-methoxyethyl gapped oligonucleotide with a
CC phosphorothioate backbone, a central "gap" region of ten nucleotides
CC flanked by four nucleotide 2'-MOE (2'-methoxyethyl) wings (cytidine
CC residues in the 2'-MOE wings are 5-methylcytidines) and targeted to human
CC inducible nitric oxide synthase (NOS) mRNA (AAH47959)

 PT Arraying genome clones.
 PS Claim 4; Page 25; 528pp; Japanese.
 CC The present invention describes a method of arraying genome clones. The
 CC method comprises: (a) clones of the genomic libraries contained in
 CC multiwell plates numbered for discrimination are mixed in each of the
 CC multiwell plates; (b) a primer designed based on the chromosome marker
 CC sequence is added to the mixture to carry out an amplification reaction;
 CC (c) a signal corresponding to the marker is detected from the resultant
 CC amplified product to specify the discrimination Nos. of the multiwell
 CC plates containing the clones having said marker sequence; (d) the order
 CC of the markers is changed so that the same discrimination Nos. succeed to
 CC the maximum in the specified discrimination Nos. to array the multiwell
 CC plates; (e) the clones in the multiwell plates of the specified
 CC discrimination Nos. are mixed respectively in each wells of longitudinal
 CC and lateral directions; (f) the mixed clones are cultured and the
 CC resultant cultures are amplified by using the above primer; (g) signals
 CC are detected from the amplified products; (h) the clones in the multiwell
 CC plates are specified from the detected result; and (i) the clones are
 CC reconstituted as the positions on the chromosome and arrayed. The
 CC microarray is useful for gene analysis. ABL42957 to ABL45322 represent
 CC PCR primers for human chromosome 1p36-35 DNA, and ABL45323 to ABL45634
 CC represent PCR primers for human chromosome 21q22.1, which are
 CC specifically claimed for use in the present invention

 PS
 XX
 CC The invention relates to a method for identifying a molecule involved in
 CC lipid regulation comprising identifying a molecule that binds to or
 CC inhibits binding of a molecule to high bone mass (HBM) or its wild type
 CC gene, Zmax1. Compounds identified by the method are useful for treating,
 CC diagnosing, preventing or screening for normal and abnormal lipid-
 CC associated conditions, including arteriosclerosis, cardiovascular
 CC disease, stroke, and osteoporosis. The compounds may also be used in the
 CC treatment or prevention of diabetic atherosclerosis, neurovascular
 CC conditions caused by plaque build-up, poor circulation due to plaque
 CC build-up and associated poor wound healing. The methods may be used in
 CC gene therapy, pharmaceutical development, and diagnostic assays for bone
 CC development disorders. Molecules identified by comparison of Zmax1 and
 CC HBM systems can be used as surrogate markers in pharmaceutical
 CC development, in diagnosis of human or animal bone disease, and in the
 CC treatment of bone diseases. Sequences ABK22776-ABK23411 represent cDNA
 CC molecules encoding human Zmax1 and HBM, and PCR primers, probes, linkers
 CC and adapters of the invention

 PT disorders, comprises contacting a target nucleic acid with a reagent that
 PT distinguishes between methylated and non-methylated CpG dinucleotides.
 PT
 XX Claim 15; Page 76; 117pp; English.
 PS
 XX The present invention describes a method for detecting and
 CC differentiating between haematopoietic cell proliferative disorders
 CC associated with at least 1 gene and/or their regulatory regions in a
 CC subject. The method comprises contacting a target nucleic acid in a
 CC biological sample obtained from the subject with at least 1 reagent,
 CC which distinguishes between methylated and non-methylated CpG
 CC dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
 CC represent specifically claimed nucleotide sequences from the present
 CC invention. Oligonucleotides from the present invention can be used: for
 CC differentiating between healthy haematopoietic cells and proliferative
 CC disorder haematopoietic cells; for differentiating between acute
 CC lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
 CC determining the cytosine methylation state and/or single nucleotide
 CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder
 CC related sequences and their complements; and as primers for the
 CC amplification of haematopoietic cell proliferation disorder related DNA
 CC sequences. The nucleotide sequences from the present invention can also
 CC be used for detecting a predisposition to, differentiation between
 CC subclases, diagnosis, prognosis, treatment and/or monitoring of
 CC haematopoietic cell proliferative disorders. The present method enables a
 CC highly specific classification of haematopoietic cell proliferative
 CC disorders allowing for improved and informed treatment of patients

 XX
 PS Example 6; SEQ ID NO 8; 92pp; English.
 XX
 CC The present sequence is that of a 3' butanol end-blocked antisense
 CC oligonucleotide targeted to the casein kinase 2 alpha' subunit. In an
 CC example from the invention, this oligonucleotide was encapsulated in
 CC nanoparticles and examined for antitumour activity. An IC50 value against
 CC chemoresistant head neck carcinoma SCC-15 cells of 5.5 μ cisplatin IC50
 CC (molar basis) was determined. This is an example of antisense
 CC oligonucleotides of the invention that suppress the expression of protein
 CC kinase CK2 alpha', CK2 beta or CK2 alpha. Such oligonucleotides can be
 CC encapsulated in nanoparticles and delivered to a cell or tissue for use
 CC in cancer therapy. The cells are selected from glial cells, astrocytes,
 CC smooth muscle cells, myofibroblasts, vascular endothelial cells, B-cell
 CC leukaemic blasts, vascular endothelial cells in solid tumours, B-cell
 CC lymphoproliferative disease cells, acute myeloid leukaemic cells, glial
 CC tumour cells, breast cancer cells, small-cell lung cancer cells, ovarian
 CC cancer cells, colorectal cancer cells, blood vessel media cells, squamous
 CC cell carcinoma cells or epithelial-derived cancer cells (claimed).

 CC This sequence represents a fragment of a human casein kinase II (CK2)
 CC alpha subunit gene which was used as a molecular target for growth
 CC inhibition. These sequences were used in the new collection of particles
 CC of the invention which comprises a bioactive component, a surfactant
 CC molecule having an HLB value of less than about 6.0 units, a
 CC biocompatible polymer, and a cell recognition component. The collection
 CC has an average diameter of less than about 200 nanometers as measured by
 CC atomic force microscopy following drying of the collection of particles.
 CC The cell recognition component has a binding affinity for a cell
 CC recognition target consisting of cell adhesion molecules, immunoglobulin
 CC superfamily, cell adhesion molecules, integrins, cadherins, selectins,
 CC growth factor receptors, collagen receptors, laminin receptors, dermatan sulphate
 CC fibronectin receptors, chondroitin sulphate receptors, heparan sulphate
 CC receptors, heparin sulphate receptors, keratan sulphate receptors,
 CC elastin receptors or vitronectin receptors. The particles may be used for
 CC delivering an anti-cancer agent to cancer cells by contacting the cancer
 CC cells with the collection of particles comprising the anticancer agent,
 CC a surfactant having an HLB value less than about 6.0 milts and a
 CC biocompatible polymer. The anticancer agent comprises a nucleic acid. The
 CC nucleic acid comprises an antisense sequence to a native human nucleic
 CC acid sequence. The antisense sequence is effective to inhibit expression
 CC of CK2. The anticancer agent comprises doxorubicin or an apoptotic agent.

XX
XX New isolated Zsig24 polypeptide and polynucleotides encoding the
PT polypeptide, useful for diagnosing chromosome 11 abnormalities, or for
PT diagnosing obesity or type II diabetes in an individual e.g., Pima
PT Indian.
XX
XX Example 2; Page 29; 34pp; English.
XX
XX The invention describes an isolated polypeptide (I) comprising an amino
XX acid sequence which shares at least 70% or greater than 95% percent
XX identity with a fully defined human Zsig24 polypeptide sequence (S1). The
XX polynucleotide encoding Zsig24 is useful as a diagnostic reagent for
XX detecting a chromosome 11 abnormality in a subject, involving amplifying
XX nucleic acid molecules that encode Zsig24 from RNA isolated from a
XX biological sample of the subject, and detecting a mutation in the
XX amplified nucleic acid molecules, where the presence of a mutation
XX indicates a chromosome 11 abnormality. The polynucleotide is also useful
XX for diagnosing a metabolic disease (e.g., obesity or diabetes, preferably
XX type II diabetes) or susceptibility to a metabolic disease in an
XX individual (e.g., Pima Indian), where the disease is related to the
XX expression or activity of Zsig24 polypeptide comprising sequence of (S1)
XX in that individual. The method optionally involves amplifying nucleic
XX acid molecules that encode Zsig24 from RNA isolated from a biological
XX sample of the individual, and detecting a mutation in the amplified
XX nucleic acid molecules, where the presence of a mutation indicates
XX a metabolic disease or susceptibility to a metabolic disease or amplifying
XX nucleic acid molecules that encode Zsig24 from RNA isolated from a
XX biological sample of the subject, and transcribing the amplified nucleic
XX acid molecules to produce Zsig24 mRNA, translating Zsig24 mRNA to produce
XX (I), and detecting a mutation (I). The methods are for identifying
XX polymorphisms in a new human gene that resides on chromosome 11q23-q24, a
XX locus linked with a heritable form of diabetes. This sequence represents
XX a primer used to locate the novel human membrane associated protein
XX Zsig24 gene to chromosome 11

XX Use of marker genes for monitoring, prognosing, diagnosing or treating
PT renal disorders, e.g. renal diseases, injuries or toxicities, or for
PT identifying agents for treating renal toxicity.
XX
XX Example 1; Page 36; 58pp; English.
XX
XX The invention relates to the use of marker genes for monitoring,
CC prognosing, diagnosing or treating renal toxicity, identifying agents for
CC treatment of renal toxicity or identifying agents that do not induce
CC renal toxicity. The marker genes are selected from Calbindin-D28k, KIM-1
CC (kidney injury molecule 1), OPN (osteopontin), EGF1 (epidermal growth
CC factor), Clusterin, VEGF (Vascular Endothelial Growth Factor), Alpha-2u
CC globulin related-protein, Complement component 4 (C4), Kidney-specific
CC Organic Anion transporter-K1 (OAR-K1), Aldolase A, Aldolase B, Podocin
CC and Alpha-2u (lipocalin 2). The marker genes are useful for monitoring,
CC prognosing, diagnosing or treating renal toxicity, identifying agents for
CC treatment of renal toxicity or identifying agents that do not induce
CC renal toxicity. The polymorphism in a gene is useful for the diagnostic
CC of renal toxicity. The method also provides a test useful for determining
CC whether a renal toxicity in a patient will respond to therapy. The
CC present sequence represents a primer used in real-time quantitative PCR
CC analysis of KIM-1 gene.

XX
XX Detecting methylation of 5' and promoter region of DD3 gene for
PT diagnosing proliferative disorders comprising contacting target nucleic
PT acid with a reagent that distinguishes between methylated and non-
PT methylated CpG dinucleotide.
XX
XX Claim 6; SEQ ID NO 78; 56pp; English.
XX
XX The present invention relates to detecting the methylation state of the
CC 5' and promoter region of the gene DD3 within a subject comprising
CC contacting a target nucleic acid having one or more sequences selected
CC from 5 3581 base pair sequences in a biological sample with at least one
CC reagent or a series of reagents. The method is useful for detecting the
CC methylation state of the 5' and promoter region of the gene DD3 within a
CC subject. The set of oligonucleotides comprising at least three of the
CC oligomers is useful for detecting the cytosine methylation state and/or
CC single nucleotide polymorphisms (SNPs) within SEQ. ID NO. 1-5 and its
CC complementary sequences. The set of oligomers is also useful for
CC detecting the methylation state of all CpG dinucleotides within SEQ ID
CC NO. 1 and its complementary sequences. The set of at least two
CC oligonucleotides can be used as primer oligonucleotides for the
CC amplification of DNA sequences selected from SEQ ID NO. 1-5 and its
CC complementary sequences. The DNA- and/or PNA-array is useful for
CC analyzing diseases associated with the methylation state of the gene DD3
CC comprising at least one nucleic acid. The methods, nucleic acids,
CC oligonucleotide or PNA-oligomer, kit, array or the set of
CC oligonucleotides is useful for the characterization, classification,
CC differentiation, grading, staging, and/or diagnosis of cell proliferative
CC disorders, or the predisposition to cell proliferative disorders. It can
CC also be used for the therapy of cell proliferative disorders. The present
CC sequence represents a detection oligonucleotide of the invention.

 XX PT Identifying a pathogen in a biological sample, useful in medical
 PT diagnosis, comprises amplifying a nucleic acid from the sample with a
 PT pair of intelligent primers, and determining the molecular mass of the
 PT amplification product.
 XX PS Example 15; SEQ ID NO 104; 228pp; English.
 XX CC This invention relates to a novel method for the rapid identification of
 CC pathogens occurring in environmental samples or biological samples
 CC derived from humans and animals. Specifically, it refers to using
 CC intelligent primers to obtain an amplification product in order that the
 CC molecular mass of the amplicon can be determined by mass spectroscopy,
 CC which in turn identifies the pathogen found in the sample. The present
 CC invention describes the rapid detection and identification of an
 CC etiologic agent that does not require nucleic acid sequencing, and
 CC instead relies on the use of intelligent primers to target ribosomal RNA
 CC or housekeeping genes. Accordingly, this method can be used to identify a
 CC pathogen or infectious agent in a biological sample, which is useful in
 CC pharmacogenetic analysis and medical diagnosis (including cancer
 CC diagnosis based on mutations and polymorphisms), or for detecting single
 CC nucleotide polymorphisms in blood typing or stereotyping of viruses. This
 CC oligonucleotide sequence is an intelligent PCR primer used to identify
 CC different bacterial strains, given in an exemplification of the
 CC invention.

 XX PT Identifying pathogens in humans or animals comprises amplifying a nucleic
 PT acid molecule from the individual with intelligent primers to obtain
 PT amplification products, and determining molecular masses of the
 PT amplification products.
 XX PS Claim 40; SEQ ID NO 104; 184pp; English.
 XX CC The invention relates to a novel method for identifying etiologic agents
 CC of disease in an individual comprising amplifying a nucleic acid from a
 CC biological sample of the individual with intelligent primers to obtain
 CC amplification products corresponding to the etiologic agents, and
 CC determining the molecular masses of the amplification products. The
 CC composition and methods of the invention are useful for identifying
 CC pathogens in biological samples from humans and animals, resolving
 CC etiologic agents present in samples obtained from humans and animals,
 CC determining detailed genetic information about such pathogens or
 CC etiologic agents, and for rapidly detecting and identifying bioagents
 CC from environmental, clinical or other samples. The present sequence
 CC represents an intelligent PCR primer of the invention.

CC The invention relates to an isolated amino acid protein sequence selected
CC from an amino acid sequence appearing as ADR16922 or an amino acid
CC sequence comprising or consisting of the extracellular domain of
CC ADR16922(amino acids 23-1385). ADR16922 is encoded by the HBM (high bone
CC mass) allele of the human Zmax1 gene and has sequence similarity to LDL
CC receptors. Also disclosed are nucleic acids, proteins, cloning vectors,
CC expression vectors, transformed hosts, methods of developing
CC pharmaceutical compositions, methods of identifying molecules involved in
CC bone development, and methods of diagnosing and treating diseases
CC involved in bone development. Specifically disclosed is the Zmax1 gene
CC and the high bone mass (HBM) allele on chromosome 11q13.3 encoding
CC ADR16922. The protein is useful for treating, diagnosing, preventing, or
CC screening for normal and abnormal conditions of bone, including metabolic
CC bone diseases, e.g. osteoporosis. The present sequence is a PCR primer
CC used in the mapping of the Zmax1/HBM gene.

CC The invention relates to an isolated nucleic acid sequence encoding a
CC high bone mass protein (HBM). The gene exists in two alleles, Zmax1, the
CC notional wild-type (the cDNA for which appears as ADR47570 encoding
CC ADR47572) and the HBM allele (the cDNA for which appears as ADR47571
CC encoding ADR47573). The two alleles differ by a single nucleotide
CC polymorphism (G to T at position 582 of ADR47570) causing a Gly to Val
CC change at position 171 of the protein. Also included are a replicative
CC cloning vector comprising HBM/Zmax1 (and a replicon operative in an
CC isolated host cell), an expression vector comprising HBM/Zmax1 operably
CC linked to a transcription regulatory region, an isolated host cell
CC transformed with the vector(s), a method for testing a substance as a
CC therapeutic agent for bone modulation in a host, a method of identifying
CC a molecule involved in bone modulation, a method for identifying a
CC (candidate) protein involved in bone modulation, a method of testing for
CC HBM activity, a method of developing a pharmaceutical for the treatment
CC of bone development disorders, a method for treating a bone development
CC disorder in an animal, a method of altering bone development in a host, a
CC method for diagnostic screening for a genetic predisposition to a bone
CC development disorder, a diagnostic assay for bone development disorders,
CC a method of expressing the HBM protein in bone tissue, a bacterial
CC artificial chromosome comprising HBM/Zmax1 sequence (appearing as
CC ADR47574-ADR47580), a method for amplifying a nucleotide polymorphism in
CC the Zmax1 or HBM gene, a method for identifying a regulatory element of a
CC HBM gene and an isolated nucleic acid segment of at least 15 contiguous
CC nucleotides including a polymorphic site from HBM/Zmax1. The nucleic acid
CC molecule and the encoded polypeptide, composition, and methods are useful
CC in diagnosing, treating and preventing a bone development disorder, i.e.
CC osteoporosis. The gene for HBM/Zmax1 is located on chromosome 11q13.3.
CC The present sequence is a primer used in the mapping of the HBM/Zmax1
CC gene.

 XX PF Use of an isolated proton-sensing GPCR polypeptide or polynucleotide in
 XX PT developing a medicament for treating medical conditions in which proton
 XX PT homeostasis is imbalanced.
 XX XX Example 11; Page 42; 83pp; English.
 XX CC The invention relates to isolated proton-sensing GPCR polypeptides and
 XX CC polynucleotides useful in developing a medicament for treating diseases
 XX CC and medical conditions in which proton homeostasis is imbalanced. The
 XX CC invention also relates to a pharmaceutical composition comprising the
 XX CC antibody, or agonist or antagonist of a proton-sensing GPCR polypeptide
 XX CC for treating or preventing diseases and medical conditions in which
 XX CC proton homeostasis is imbalanced, a method of screening for compounds
 XX CC that stimulate or inhibit the function or expression level of the proton-
 XX CC sensing GPCR polypeptides, a method of screening for compounds that
 XX CC agonize or antagonize the proton-sensing activity of the GPCR
 XX CC polypeptides and a diagnostic kit comprising the antibody against a
 XX CC proton-sensing GPCR polypeptide or pharmaceutical preparation comprising
 XX CC the antibody. Treating or preventing diseases and medical conditions in
 XX CC which proton homeostasis is imbalanced comprises administering to a
 XX CC subject the antibody, or agonist or antagonist of a proton-sensing GPCR
 XX CC polypeptide. Screening for compounds that stimulate or inhibit the
 XX CC function or expression level of a proton-sensing GPCR polypeptide
 XX CC comprises measuring or detecting, quantitatively or qualitatively, the
 XX CC binding of a candidate compound to the polypeptide (or to the cells or
 XX CC membranes expressing the polypeptide) or its fusion protein by means of a
 XX CC label directly or indirectly associated with the candidate compound,
 XX CC measuring the competition of binding of a candidate compound to the
 XX CC polypeptide (or to the cells or membranes expressing the polypeptide) or
 XX CC a fusion protein thereof in the presence of a labeled competitor, testing
 XX CC whether the candidate compound results in a signal generated by
 XX CC activation or inhibition of the polypeptide using detection systems
 XX CC appropriate to the cells or cell membranes expressing the polypeptide,
 XX CC and detecting the effect of a candidate compound on the production of
 XX CC mRNA encoding the polypeptide or the polypeptide in cells, using for
 XX CC instance, an ELISA assay. The isolated proton-sensing GPCR polypeptides,
 XX CC polynucleotides and antibodies that bind to the polypeptides are useful
 XX CC in developing a medicament for treating or preventing diseases and
 XX CC medical conditions in which proton homeostasis is imbalanced, e.g.,
 XX CC osteoporosis. This sequence represents a reverse transcriptase PCR (RT-
 XX CC PCR) primer used in expression profiling of human GPR4, used in the scope
 XX CC of the invention.

 XX PT New modified SecA protein, useful in microbial production of proteins,
 XX PT provides a higher level of protein secretion than wild-type protein.
 XX PF Example; Page 33; 71pp; German.
 XX CC This invention describes a novel variant SecA protein (a translocation
 XX CC ATPase) and its encoding polynucleotide which provides an increased level
 XX CC of protein secretion, particularly hormones, enzymes, growth factors,
 XX CC pharmaceutical proteins, or cytokines. The protein includes at least one
 XX CC alteration in the amino acid regions that form the regulatory elements
 XX CC IRA-1 and/or IRA-2, and is derived from Bacillus subtilis, B.
 XX CC licheniformis, B. amyloliquefaciens, Staphylococcus carnosus, Escherichia
 XX CC coli or Corynebacterium glutamicum. Most preferably the alterations are
 XX CC in the 198-772 region of the S. carnosus protein or in region 442-767 of
 XX CC the B. subtilis protein. Even a single mutation in secA can significantly
 XX CC improve secretory activity. The invention also describes a method for
 XX CC microbial production of proteins that includes expression of mutant secA
 XX CC in a host cell which improves secretion and yield of the protein, and may
 XX CC make possible secretion of proteins that are not normally secreted at
 XX CC all. Preferably the microorganisms are the same species as those from
 XX CC which the secA polypeptides are derived. The secA polynucleotides can be
 XX CC labeled and used as probes for identification and/or isolation of genes
 XX CC that encode proteins involved in protein secretion. A strain of B.
 XX CC subtilis, designated RMA, was constructed in which the normal secA gene
 XX CC was replaced by secA from S. carnosus. Suppressor mutants of RMA were
 XX CC selected for inability to grow at 25degC and/or inability to produce
 XX CC spores, indicative of changes in the inserted secA gene. The mutations
 XX CC present in the suppressor mutants were identified, then transferred to
 XX CC the secA gene of B. subtilis. The mutant strains of B. subtilis were then
 XX CC tested for expression of alkaline phosphatase PhoB containing the
 XX CC Leu501n mutation, which is normally secreted only very inefficiently in
 XX CC the wild-type. This protein was secreted much more effectively by the
 XX CC mutant strain. This sequence represents a PCR primer used to amplify the
 XX CC S. carnosus wild type secA gene.

XX Identifying candidate molecule involved in bone modulation, comprises
PT identifying molecule that binds to Zmax1, high bone mass (HBM) protein,
PT or both Zmax1 and HBM protein.
XX
XX Disclosure; SEQ ID NO 517; 308pp; English.
XX
XX The present invention relates to a method (M1) for identifying a
CC candidate molecule involved in bone modulation. The method comprises
CC identifying a molecule that binds to High Bone Mass protein (HBM) and/ or
CC Zmax1 protein. The HBM gene exists in two alleles: Zmax1, the notional
CC wild-type (the cDNA for which appears as AEB69299 encoding AEB69301 and
CC AEB69939 encoding AEB69940) and the HBM allele (the cDNA for which
CC appears as AEB69300 encoding AEB69302). The two alleles differ by a
CC single nucleotide polymorphism (T to G at position 582 of AEB69299)
CC causing a Gly to Val change at position 171 of the protein. The HBM
CC protein has the property of causing elevated bone mass, while the Zmax1
CC protein does not. The gene for HBM/Zmax1 is located on chromosome
CC 11q13.3. Also claimed is a method of pharmaceutical development for
CC treating of bone development disorders, such as osteoporosis,
CC osteomalacia, bone fractures, Paget's disease, etc., which comprises
CC identifying a molecule that binds to the Zmax1 protein, or to HBM, or
CC both. PCR primers AEB69364 - AEB69923 are for sequence-tagged site (STS)
CC markers in the HBM region on chromosome 11q13.3, which were used to
CC prepare a physical map of the Zmax1 region.

XX Generating a siRNA expression library for selective post-transcriptional
PT silencing of genes encoding a family of proteins comprises identifying a
PT consensus sequence for protein families.
XX
XX Example 2; SEQ ID NO 195; 44pp; English.
XX
XX The invention relates to a method for generating a siRNA expression
CC library for selective post-transcriptional silencing of genes encoding a
CC family of proteins comprising identifying a consensus sequence for the
CC family of proteins. The method comprises: (a) identifying a consensus
CC sequence for the family of proteins; and (b) generating an siRNA
CC expression library whose members encode siRNA molecules that target at
CC least all mRNA encoding all known members of the family of proteins. The
CC family of proteins is G coupled receptors, ion channels, receptor
CC tyrosine kinases, non-receptor tyrosine kinases, nuclear hormone
CC receptors, GTPases, ATPases, serine/threonine kinases, proteases, matrix
CC metalloproteinases, GTPase-activating proteins or E3 ubiquitin ligases.
CC Identifying a consensus sequence comprises identifying at least one, two
CC or more signature motif for the family of proteins. The method is useful
CC for generating a siRNA expression library for selective post-
CC transcriptional silencing of genes encoding a family of proteins. The
CC library is useful for identifying genes involved in disease processes.
CC This sequence corresponds to an oligonucleotide used in the method of the
CC invention.

XX PT Novel genetic variants of Cytochrome P450, Subfamily IID, Polypeptide 6 isogenes, useful for improving efficiency and reliability in drug development for treating hypertension, arrhythmias and Parkinson's disease.

XX PS Claim 15; Page 18; 158pp; English.

XX CC The invention relates to a method for haplotyping the cytochrome P450, subfamily IID, polypeptide 6 (CYP2D6) gene (ABQ72215, ABQ72364) of an individual, and also describes 29 novel polymorphic sites within the human CYP2D6 gene. The CYP2D6 gene is located on chromosome 22q13.1 and contains 9 exons which encode a 497 amino acid protein (ABQ09563). CYP2D6 is a mono-oxygenase involved in the detoxification of many drugs and environmental chemicals. It plays a role in the metabolism of drugs such as antiarrhythmics, adrenoceptor antagonists and tricyclic antidepressants, and is also involved in the formation of a metabolite linked to the drug-induced lupus syndrome observed with procainamide. Variations in CYP2D6 activity or expression may also influence an individual's susceptibility to environmentally-linked diseases, and it has been demonstrated that CYP2D6 activity may be involved in the pathogenesis of Parkinson's disease, with individuals with a less active form of the enzyme tending to have an earlier onset of this condition. CYP2D6 nucleic acid sequences are useful in studying the expression and function of CYP2D6, and in expressing CYP2D6 protein for use in screening drugs for the treatment of CYP2D6-associated diseases (e.g., hypertension, atrial and ventricular arrhythmias, Parkinson's disease, and drug-induced lupus syndrome) or which are metabolised by CYP2D6. CYP2D6 nucleic acids and proteins are also useful in studying the effect of polymorphisms on the biological activity of CYP2D6. Polymorphisms in the target region may be determined by the use of allele-specific oligonucleotides (ASOs; ABQ72217-ABQ72303) as probes and primers, and by primer extension using oligonucleotide primers comprising sequences ABQ72304-ABQ72361. The method of the invention is useful for haplotyping the CYP2D6 gene in populations and in individuals, enabling decisions to be made as to whether CYP2D6 is a likely therapeutic target for a disease of interest, and to control for genetically-based bias in the design of drugs that target or are metabolised by CYP2D6. In addition, transgenic animals comprising a human CYP2D6 gene are useful for studying the expression of CYP2D6 isogenes in vivo, for in vivo screening and testing of drugs targeted to or metabolised by CYP2D6, and for testing the efficacy of therapeutic agents and compounds for treating CYP2D6-associated conditions in a biological system. Sequences ABQ72246-ABQ72303 represent specifically claimed allele-specific oligonucleotide (ASO) primers used for detecting polymorphisms in the CYP2D6 gene

XX Novel therapeutic agent of hormone dependent cancer, comprising hormone
PT group, chemical agent and differentiation inducing agent, useful for
PT treating hormone dependent cancer in mammal.

XX Example 1; Page 14; 15pp; Japanese.

XX This invention relates to a novel therapeutic agent for the treatment of
CC hormone dependent cancer that comprises a hormone group chemical agent
CC and a differentiation inducing agent. Specifically, the hormone group
CC chemical agent refers to an agonist derived from the luteinising hormone-
CC releasing hormone (LH-RH), whereas the differentiation inducing agent is
CC preferably a fat soluble vitamin, or can be a nuclear receptor ligand,
CC histone acetylation regulation drug or a DNA methylation regulation drug.
CC The present invention describes using the LH-RH agonist as a preventative
CC or therapeutic agent for hormone dependent prostate, ovarian, uterine or
CC breast cancer, and can also delay change in hormone independent cancer.
CC Accordingly, the compositions of the invention are described as
CC exhibiting high anti-tumour activity. This oligonucleotide sequence is a
CC degenerate PCR primer used to amplify the insulin receptor, in an
CC exemplification of the invention.

 XX
 XX Probe set for identifying human leukocyte antigen-DR allele in test
 PT sample of patients with e.g. cancer and diabetes, comprises probes
 PT corresponding to sequences such as DRB1.010101 or DRB1.0104.
 XX
 XX Claim 2; SEQ ID NO 749; 87pp; Japanese.
 XX
 XX This invention relates to a novel probe set for identifying a human
 CC leukocyte antigen (HLA)-DR allele in a test substance, which comprises
 CC probes with partial sequence containing base written in capital letter as
 CC fully defined in the HLA-DR allele list given in the specification. The
 CC invention is useful for identifying HLA-DR allele in a test sample. The
 CC probe set can identify HLA-DR alleles in patients with organ transplant,
 CC cancer, diabetes and other multiple-factor diseases, and enables
 CC provision of tailored medical treatment to individual patients. The
 CC present sequence is that of a probe which is a member of a novel probe
 CC set of the invention.

XX PT Identifying new catalytic nucleic acid that modulates selected processes - especially ribozymes that cleave Raf RNA for treating cancer, restenosis, and also new ribozymes and modified nucleoside triphosphates used as antiviral agents and synthons.

XX PS Claim 177; Page 160; 259pp; English.

XX CC A method has been developed for the identification of a nucleic acid capable of modulating a process in a biological system. The method comprises: (a) introducing into the system a random library of nucleic acid catalysts (NAC) having a substrate binding domain (SBD), comprising a random sequence, and a catalytic domain (CD); and (b) identifying NAC in systems where modulation has occurred and/or determining the sequence of at least part of the SBDs in such systems. Nucleic acid molecules with endonuclease activity and catalytic activity, from the present invention, are used to modulate gene expression in plant and mammalian cells and to cleave target nucleic acid, particularly for treating systemic diseases caused by specific RNA, e.g. cancer, inflammation, psoriasis, non-hepatic ascites and infection. They may also be used to detect genetic drift and mutations in diseased cells and to determine c-raf RNA. Specifically NACs with RNA-cleaving activity that modulate expression of the Raf gene, are used to treat cancer, restenosis, psoriasis or rheumatoid arthritis, or generally any condition associated with the level of c-raf. Introduction of sugar/phosphate modifications increases stability against nuclease and activity. AAV90922 to AAV93877 represent NACs that can be used in the method, specifically for modulating the expression of a Raf gene

Enzymatic nucleic acid molecules able to cleave separate RNA molecules

are used for treating cancer, Alzheimer's disease, hepatitis, diabetes,

obesity and heart disease.

Example 1; Page 294; 717pp; English.

The present invention relates to the use of enzymatic nucleic acid

molecules (e.g. ribozymes) to modulate gene expression. The invention of

also methods for their use to down regulate or inhibit the expression of

genes encoding protein-tyrosine-phosphatase-1b (PTB-1B), methionine

aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C

alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor

receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),

presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic

nucleic acid molecules used to inhibit the expression of the said genes

include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, ambersyme,

zinzyme, and/or DNazyme motifs. The methods of the invention are useful

for treating cancer, in particular breast cancer, Alzheimer's disease,

diabetes, obesity, cardiac diseases e.g. heart disease, age-related

diseases, hepatitis B infections, and hepatitis and hepatocellular

carcinoma. The enzymatic nucleic acid molecules can also be used as

diagnostic tools to examine genetic drift and mutations within diseased

cells and to detect the presence of specific RNA in a cell. The present

invention represents a substrate/target sequence for a ribozyme used in

the examples of the present invention. Note: Some SEQ ID Nos are repeated

more than once in the specification, but these have different sequences

associated with them.

DR Enzymatic nucleic acid molecules able to cleave separate RNA molecules
PT are used for treating cancer, Alzheimer's disease, hepatitis, diabetes,
PT obesity and heart disease.
XX Example 2; Page 200; 717pp; English.
XX The present invention relates to the use of enzymatic nucleic acid
CC molecules (e.g. ribozymes) to modulate gene expression. The invention
CC also methods for their use to down regulate or inhibit the expression of
CC genes encoding protein-tyrosine-phosphatase-1b (PTP-1B), methionine
CC aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C
CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
CC receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),
CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
CC nucleic acid molecules used to inhibit the expression of the said genes
CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
CC zynzyme, and/or DNzyme motifs. The methods of the invention are useful
CC for treating cancer, in particular breast cancer, Alzheimer's disease,
CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related
CC diseases, hepatitis B infections, and hepatitis and hepatocellular
CC carcinoma. The enzymatic nucleic acid molecules can also be used as
CC diagnostic tools to examine genetic drift and mutations within diseased
CC cells and to detect the presence of specific RNA in a cell. The present
CC sequence represents a substrate/target sequence for a ribozyme used in
CC the examples of the present invention. Note: Some SEQ ID Nos are repeated
CC more than once in the specification, but these have different sequences
CC associated with them.

 DR Enzymatic nucleic acid molecules able to cleave separate RNA molecules
 XX are used for treating cancer, Alzheimer's disease, hepatitis, diabetes,
 PT obesity and heart disease.
 XX Example 4; Page 373; 717pp; English.
 XX The present invention relates to the use of enzymatic nucleic acid
 CC molecules (e.g. ribozymes) to modulate gene expression. The invention
 CC also methods for their use to down regulate or inhibit the expression of
 CC genes encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine C
 CC aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C
 CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
 CC receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),
 CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
 CC nucleic acid molecules used to inhibit the expression of the said genes
 CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
 CC zynzyme, and/or DNAzyme motifs. The methods of the invention are useful
 CC for treating cancer, in particular breast cancer, Alzheimer's disease,
 CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related
 CC diseases, hepatitis B infections, and hepatitis and hepatocellular
 CC carcinoma. The enzymatic nucleic acid molecules can also be used as
 CC diagnostic tools to examine genetic drift and mutations within diseased
 CC cells and to detect the presence of specific RNA in a cell. The present
 CC sequence represents a substrate/target sequence for a ribozyme used in
 CC the examples of the present invention. Note: Some SEQ ID Nos are repeated
 CC more than once in the specification, but these have different sequences
 CC associated with them.

XX
XX The present invention describes a human genome-derived myosin-like
CC protein 1 (hGDMPLP-1). The protein and polynucleotide sequences of hGDMPLP-
CC 1 can be used in gene therapy and vaccine production. The hGDMPLP-1
CC nucleic acids can be used as probes to detect, characterize and quantify
CC hGDMPLP-1 nucleic acids in samples, as amplification substrates, to
CC provide initial substrates for the recombinant engineering of hGDMPLP-1
CC protein variants having desired phenotypic improvements, and for
CC expressing the proteins. The hGDMPLP-1 proteins or polypeptides may be
CC used as immunogens to raise antibodies that specifically recognise hGDMPLP
CC -1 proteins, as standards in assays used to determine the concentration
CC and/or amount specifically of hGDMPLP proteins, as specific biomolecule
CC capture probes for surface-enhanced laser desorption/ionisation, as
CC therapeutic supplement in patients having specific deficiency in hGDMPLP-1
CC production, and in vaccines or for replacement therapy. The
CC polynucleotide sequences encoding hGDMPLP-1 may be used for diagnosing a
CC disorder associated with the expression of hGDMPLP-1, in particular heart

CC and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.
 CC The present sequence represents an oligomer used in the screening of the
 CC hGDMLP-1 sequence in the exemplification of the present invention. N.B.

 PT New polypeptide, for raising antibodies that recognize hGDMPLP-1 proteins,
 PT or as specific biomolecule capture probes for surface-enhanced laser
 PT desorption ionization, comprises human myosin-like protein hGDMPLP-1.
 PT
 XX
 PS Disclosure; SEQ ID NO 906; 214pp; English.
 XX
 CC The present invention describes a human genome-derived myosin-like
 CC protein 1 (hGDMPLP-1). The protein and polynucleotide sequences of hGDMPLP-
 CC 1 can be used in gene therapy and vaccine production. The hGDMPLP-1
 CC nucleic acids can be used as probes to detect, characterise and quantify
 CC hGDMPLP-1 nucleic acids in samples, as amplification substrates, to
 CC provide initial substrates for the recombinant engineering of hGDMPLP-1
 CC protein variants having desired phenotypic improvements, and for
 CC expressing the proteins. The hGDMPLP-1 proteins or polypeptides may be
 CC used as immunogens to raise antibodies that specifically recognise hGDMPLP
 CC -1 proteins, as standards in assays used to determine the concentration
 CC and/or amount specifically of hGDMPLP proteins, as specific biomolecule
 CC capture probes for surface-enhanced laser desorption ionisation, as
 CC therapeutic supplement in patients having specific deficiency in hGDMPLP-1
 CC production, and in vaccines or for replacement therapy. The
 CC polynucleotide sequences encoding hGDMPLP-1 may be used for diagnosing a
 CC disorder associated with the expression of hGDMPLP-1, in particular heart
 CC and skeletal muscle disorders. hGDMPLP-1 is localised to chromosome 22.
 CC The present sequence represents an oligomer used in the screening of the
 CC hGDMPLP-1 sequence in the exemplification of the present invention. N.B.
 CC The sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequence

XX Human leukocyte antigen (HLA) typing, useful for judging HLA genotypes of
PT individuals e.g. by determining immunogenetic differences when
PT transplanting between them.
XX
XX Claim 10; Page 209; 345pp; Japanese.
XX
XX The invention relates to a typing kit for judging human leukocyte antigen
CC (HLA) genotype of a sample by hybridising a substrate on which 10-24 base
CC oligonucleotides (ABL30512-ABL31809) originating in the sequences of
CC genes e.g. belonging to HLA class I antigens on human genome and
CC containing gene polymorphisms as alloantigens have been immobilised as
CC primers for amplification of cleaved nucleic acids relating to gene
CC polymorphisms. The method is useful for judging HLA genotypes of
CC individuals by determining immunogenetic differences before transplanting
CC between them, providing genetic information to decide compatibility of
CC organ and tissue for transplantation e.g. of bone marrow, kidney, liver,
CC pancreas, Langerhans islet in pancreas and cornea, susceptibility
CC diagnosis of genetic diseases and identifying individuals

XX
CC New nucleic acid molecule that modulates replication of West Nile Virus (WNV), useful for treating a condition related to WNV infection e.g. pancreatitis, meningitis, hepatocellular carcinoma or cirrhosis.
XX
PS Claim 23; SEQ ID NO 11467; 495pp; English.
XX
CC The invention relates to nucleic acid molecules that modulate replication of the West Nile Virus (WNV). The nucleic acid molecules are useful for treating a condition related to WNV infection e.g. pancreatitis, encephalitis, myocarditis, meningitis, neurologic infection, hepatitis, liver failure, hepatocellular carcinoma or cirrhosis. The nucleic acid molecule is selected from the group of ribozymes consisting of Hammerhead, Inozyme, G-cleaver, DNazyme, Amberzyme and Zinzyme. The nucleic acid molecules further comprise at least five ribose residues, at least ten 2'-O-methyl modifications, phosphorothioate linkages on at least three of the 5' terminal nucleotides and a 3' end modification of a

CC 3'-3' inverted abasic moiety. Nucleic acid molecules SEQ ID NO 1 to 37080
CC are claimed; however, SEQ ID NO 2194-2206 and 17502-17514 are not given
CC in the specification. The present sequence is that of a nucleic acid
CC molecule of the invention

XX New isolated nucleic acid, useful for treating viral diseases associated
XX with tumors and cell degeneration, also related polypeptides, antibodies
XX and transfected cells.

XX PS Disclosure; Page 133; 720pp; French.

XX The invention relates to a novel isolated 17 mer nucleic acid sequence,
XX given in the specification, a sequence containing at least 15 consecutive
XX nucleotides from the 17 mer sequence, a sequence with, after optimal
XX alignment, at least 80 % identity to the 17 mer sequence, a sequence that
XX hybridizes to them under highly stringent conditions, or the complement
XX of any of them, or the corresponding RNA. The novel isolated nucleic
XX acids of the invention are useful as probes and primers for detecting,
XX identifying, quantifying and/or amplifying a nucleic acid, e.g. as one
XX component of a gene chip, in vitro as (anti)sense reagents, and for
XX production of recombinant polypeptides. Any of the nucleic acids,
XX polypeptides, vectors containing the nucleic acids, cells containing the
XX vector or antibodies directed against the polypeptides are useful for
XX preparation of pharmaceuticals for prevention and/or treatment of viral
XX diseases that are characterised by development of tumours or cell
XX degeneration, specifically cancer but also Alzheimer's disease and
XX schizophrenia. Analysis of the expression of the 17 mer nucleic acids in
XX patient samples is useful for diagnosis and/or prognosis of these
XX diseases. The polypeptides can also be used to generate antibodies, and
XX both the polypeptide and antibodies are useful as components of protein
XX chips. The nucleic acid sequences of the invention can be used in gene

CC therapy. This polynucleotide sequence represents a tumour suppression
CC related human fukutin oligonucleotide of the invention

XX Novel enzymatic nucleic acid molecules which down regulates expression of
XX a sequence encoding a subunit of nuclear factor kappa B useful for
XX treating cancer, inflammatory disorders and autoimmune diseases.

XX Claim 3; Page 32; 72pp; English.

XX The invention describes an enzymatic nucleic acid molecule (I) which down
XX regulates expression of a sequence encoding a subunit of nuclear factor
XX kappa B (NFkB), where (I) is an inozyme, zinzyme, G-cleaver or amberzyme
XX configuration. The enzymatic nucleic acid molecule is adapted to treat
XX cancer and is useful for down-regulating REL-A activity in a cell, for
XX treating a patient having a condition associated with the level of REL-A.
XX (I) is useful for cleaving RNA comprising a sequence of REL-A gene, in
XX the presence of a divalent cation, especially Mg²⁺. The enzymatic and

CC antisense nucleic acid molecules are useful for treating breast, lung,
 CC prostate, colorectal, brain, oesophageal, stomach, bladder, pancreatic,
 CC cervical, head and neck, ovarian cancer, melanoma, lymphoma, glioma or
 CC multidrug resistant cancer. The method involves use of other drug
 CC therapies such as monoclonal antibodies, REL-A-specific inhibitors or
 CC chemotherapy including paclitaxel, docetaxel, cisplatin, methotrexate,
 CC cyclophosphamide, doxorubicin, fluorouracil carboplatin, edatrexate,
 CC gemcitabine or radiation therapy. The enzymatic and antisense nucleic
 CC acid molecules are also useful for treating inflammatory disease such as
 CC rheumatoid arthritis, restenosis, asthma, Crohn's disease, diabetes,
 CC obesity, autoimmune disease, lupus, multiple sclerosis, transplant/graft
 CC rejection, gene therapy applications, ischaemia/reperfusion injury
 CC (central nervous system (CNS) and myocardial), glomerulonephritis,
 CC sepsis, allergic airway inflammation, inflammatory bowel disease or
 CC infection. This sequence represents the substrate of a novel enzymatic
 CC nucleic acid molecule

XX Novel enzymatic nucleic acid that down-regulates expression of neurite
PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
PS Claim 59; SEQ ID NO 1752; 317pp; English.
XX
CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

XX Novel enzymatic nucleic acids, ribozymes, which modulate expression of
PT genes encoding vascular endothelial growth factor and/or VEGF receptor,
PT useful for inhibiting tumor angiogenesis in cell, and for treating
PT cancer.
XX
PS Disclosure; SEQ ID NO 3572; 172pp; English.
XX
CC The invention relates to enzymatic nucleic acids (I) i.e.
CC ribozymes/DNAzymes/zinczymes that target and modulate expression of, genes
CC encoding vascular endothelial growth factor (VEGF) and/or VEGF receptor
CC (VEGFR1 and 2 encode by the FLT-1 and Kdr genes respectively). Also
CC included are a composition comprising (I) and a carrier, administering
CC (I) to a cell (by contacting the cell with the compound under conditions
CC suitable for the administration), administering (I) to a cell (in
CC conjunction with one or more other drug by contacting the cell with the
CC compound and the other drug under conditions suitable for the
CC administration), administering (I) to a mammal (by contacting the mammal
CC with the compound under conditions suitable for the administration),
CC treating (M1) a subject having endometriosis (by contacting a subject
CC with, or administering to subject, a nucleic acid molecule (II) that
CC modulates expression of VEGF, VEGFR1, and/or VEGFR2), a mammalian cell
CC (III) comprising (I) and administering to a mammal (I) (in conjunction
CC with a chemotherapeutic agent comprising contacting the mammal with the
CC compound and the chemotherapeutic agent under conditions suitable for the
CC administration). (I) is administered to a mammalian cell, preferably
CC human cell in the presence of a delivery reagent which is a lipid such as
CC cationic lipid or phospholipid, or a liposome. The enzymatic nucleic acid
CC molecule has an endonuclease activity to cleave RNA encoded by an VEGFR1
CC and/or VEGFR2 gene, and is in a hammerhead, inozyme, DNzyme, G-cleaver,
CC or Amberzyme configuration. The enzymatic nucleic acids are useful for
CC inhibiting ocular angiogenesis associated with diabetic retinopathy or
CC age-related diabetic retinopathy, in a subject. They are also useful for
CC inhibiting angiogenesis, preferably tumor angiogenesis in cell, and for
CC treating a subject having a condition associated with an increased level
CC of VEGF receptor, where the condition is cancer, e.g. breast cancer, lung
CC cancer (such as non-small cell lung carcinoma), colorectal cancer, renal
CC cancer (such as renal cell carcinoma), pancreatic cancer. The enzymatic
CC nucleic acids are useful for treating a subject (preferably human) having
CC endometriosis, psoriasis, age-related macular degeneration, proliferative
CC diabetic retinopathy, hypoxia-induced angiogenesis, rheumatoid arthritis,
CC wound healing, endometrial carcinoma, gynecologic bleeding disorders,
CC irregular menstrual cycles, ovulation, premenstrual syndrome, and
CC menopausal dysfunction. The enzymatic nucleic acids are useful for birth
CC control by inhibiting ovulation or embryonic uterine implantation. The
CC present sequence is a target sequence from the human VEGFR2/Kdr mRNA.

 DR Vector containing nucleic acid associated with breast cancer, useful for
 XX treating, diagnosing and characterizing breast cancer, also related
 PT polypeptides and antibodies.
 XX Claim 1; SEQ ID NO 187; 61pp; English.
 XX The invention relates to a composition which contains at least one vector
 CC (B) containing a nucleic acid (I) associated with breast cancer. The
 CC vector (B), also polypeptides (II) encoded by (I), are used for treatment
 CC of breast cancer. Arrays based on (I), (II), or their fragments, and (II)
 CC -specific antibodies (Ab) are used to predict characteristics (e.g.
 CC invasiveness or stage) of breast cancer, and (I), or its fragments, are
 CC used to modulate characteristics of such cells; to identify breast cancer
 CC genes and to detect breast cancer (by detecting polymorphic nucleic acid
 CC or its products). The present sequence represents a human ER+ breast
 CC cancer differentially expressed sequence.

 XX New single nucleotide polymorphisms (SNPs) associated with rheumatoid

PT arthritis (RA), useful in identification of individuals at risk of
 PT developing RA or other autoimmune disease, and in development of
 PT therapeutic agents.

XX Claim 21; SEQ ID NO 49938; 141bp; English.

XX The invention relates to an isolated nucleic acid molecule comprising at
 CC least 8 contiguous nucleotides where one of the nucleotides is a single
 CC nucleotide polymorphism (SNP) selected from any one of the nucleotide
 CC sequences of SEQ ID NOs:1-669 and 1339-49582, or their complements. The
 CC SNPs are useful as targets for the design of diagnostic reagents and the
 CC development of therapeutic agents, as well as for disease association and
 CC linkage analysis. In particular, the SNPs are useful for identifying an
 CC individual who is at an increased or decreased risk for developing an
 CC autoimmune disease such as rheumatoid arthritis, type 1 diabetes,
 CC multiple sclerosis, systemic lupus erythematosus, inflammatory bowel
 CC diseases, psoriasis, thyroiditis, celiac disease, pernicious anaemia,
 CC asthma, vitiligo, glomerulonephritis, Graves' disease, myocarditis,
 CC Sjogren disease, or primary systemic vasculitis. Methods associated with
 CC the SNPs are useful for early detection of the disease, for providing of
 CC clinically important information for the prevention and/or treatment of
 CC the autoimmune diseases particularly rheumatoid arthritis, and for
 CC screening and selecting therapeutic agents. The SNPs are useful for human
 CC identification applications. The genes containing the SNPs are useful for
 CC treating the diseases defined above. The nucleic acid molecules are
 CC useful as hybridization probes for genotyping SNPs in messenger RNA,
 CC cDNA, genomic DNA, and genomic clones. The nucleic acid molecules are
 CC useful for constructing host cells expressing a part or all of the
 CC nucleic acid molecules and variant peptides, for constructing transgenic
 CC animals, for assaying or screening drugs that modulate nucleic acid
 CC expression, or for gene therapy in patients whose cells have aberrant
 CC gene expression. This sequence corresponds to a PCR primer which
 CC hybridises to the nucleic acids of the invention to amplify the SNP
 CC containing region. (Note: SEQ ID NOs 1-49582 are claimed and stated as
 CC being provided in the specification, however these sequences are not
 CC provided in the printed specification).

XX Novel double-stranded short interfering RNA molecule having first
 PT nucleotide sequence complementary to RNA encoding HER2 or its portion,
 PT and second nucleotide sequence having complementarity to first sequence,

PT useful for treating cancer.
 XX Example 1; SEQ ID NO 2180; 143pp; English.
 XX
 CC The invention relates to a double-stranded short interfering RNA (siRNA)
 CC molecule (I) comprising a first nucleotide sequence having 19-23
 CC nucleotides complementary to an RNA sequence encoding HER2 or its
 CC portion, and a second nucleotide sequence having 19-23 nucleotides
 CC exhibiting complementarity to the first sequence, and including at least
 CC one nucleotide that is not a 2'-OH containing ribonucleotide. Also
 CC described is a method of producing a class of nucleic acid-based gene
 CC modulating agents that exhibit a high degree of specificity for RNA of a
 CC desired target. (I) is useful for modulating HER2 activity in a cell, and
 CC for treating diseases or conditions related to levels of HER2 gene
 CC expression. (I) is useful for treating cancer, such as pancreatic cancer,
 CC bladder cancer, lung cancer, breast cancer or prostate cancer. The
 CC present sequence represents a human H-Ras substrate RNA sequence for a
 CC DNzyme (ribozyme), which is used in an example from the present
 CC invention for the identification of potential target sites in human Ras
 CC RNA.

PT Preparation of antisense oligo:nucleotide(s) which lack long runs of
PT consecutive guanosine or inosine - and have specific ratio of residues
PT able to form two or three hydrogen bonds, have greater activity and
PT reduced toxicity, used therapeutically or to modulate growth of cells in
PT culture.

XX Example 3; Fig 5c; 286pp; English.

CC AAV48564-708 represent antisense oligonucleotides directed against the
CC junB and junD genes. Of these, only oligonucleotides AAV48565-614
CC resulted in effective downregulation of negative growth control by JunB
CC or JunD, while AAV48615-708 had little effect. The oligonucleotides
CC exemplify the invention. The specification describes oligonucleotides
CC that contain 8-30 nucleotides, which contain at most 8 nucleotides that
CC can each form three hydrogen bonds to cytosine; do not contain four
CC consecutive nucleotides able to form three H-bonds each to four
CC consecutive cytosines; do not contain two sequences of three consecutive
CC nucleotides each able to form three H-bonds to three consecutive
CC cytosines, and the ratio between residues able to form two H-bonds each
CC (2R) or three such bonds (3R) is given by $2R/3R = 0.33-0.72$. The
CC oligonucleotides are used to modulate expression of genes, particularly
CC the genes for p53, ErbB-2, junB, junD, TGF-beta 1 or beta 2 to control
CC proliferation of primary cell cultures (e.g. bone marrow stem, liver or
CC kidney cells, osteoclasts, osteoblasts and/or keratinocytes). The
CC oligonucleotides can also be used to analyse function of proteins (by
CC altering their expression or activity) and therapeutically, e.g. in cases
CC of cancer or (targeting TGF) for stimulating the immune system

XX New antisense compound, that inhibits the expression of human cell
PT surface adhesion receptor CD44, for treating hyperproliferative disorders
PT and inflammatory conditions, such as cancer and rheumatoid arthritis.

XX Example 15; Page 77; 105pp; English.

XX The present sequence is one of a large number of antisense
CC oligonucleotides designed to target different regions of the human CD44
CC mRNA. CD44 is a multifunctional human cell surface adhesion receptor. The
CC oligonucleotides were analysed for effect on CD44 mRNA levels by that
CC quantitative real-time PCR analysis. Antisense oligonucleotides that
CC inhibit CD44 expression can be used to treat CD44-associated conditions
CC including hyperproliferative disorders, such as cancer, and inflammatory
CC conditions, such as rheumatoid arthritis. The antisense compounds
CC hybridise to CD44 nucleic acids, thus allowing sandwich and other assays
CC to be easily constructed. Note: The sequence has a phosphorothioate
CC backbone and may be either an oligodeoxynucleotide or a chimeric
CC oligonucleotide containing 2'-methoxyethyl (2'-MOE) wings and a deoxy
CC gap. The ISIS number given above corresponds to the oligodeoxynucleotide
CC sequence

XX
XX Antisense compounds which inhibit the expression of the human NF-kappa-B
PT p65 subunit (p65) useful for treating diseases associated with p65
PT expression and as prophylaxis to prevent of delay infection, inflammation
PT or tumor formation.
XX
XX Example 15; Col 41; 33pp; English.
PS
XX The present sequence is one of a number of oligonucleotides designed to
CC target different regions of the human NF-kappa-B p65 subunit, which is a
CC member of the Rel/NF-kappa-B family of transcription factors. Rel/NF-
CC kappa-B proteins are involved in a diverse set of signaling pathways
CC involving stress, apoptosis, cancer, growth, infection and inflammation.
CC Antisense oligonucleotides are able to inhibit expression of the p65
CC subunit and may therefore be used in the treatment of disorders
CC associated with NF-kappa-B p65 subunit expression. They may be used as a
CC prophylaxis to prevent or delay infection, inflammation or tumor
CC formation. Antisense compounds may also be used for research and
CC diagnostics because they hybridise to nucleic acids encoding NF-kappa-B
CC p65 subunit. The effect of antisense oligonucleotides on NF-kappa-B p65
CC subunit mRNA levels was measured using real-time quantitative PCR and
CC Northern blot analysis. Antisense oligonucleotides were synthesised on an
CC automated DNA synthesiser

XX Composition comprising enzyme which comprises heterologous functional
PT domain that provides altered functionality in nucleic acid cleavage
PT assay, useful for cleaving nucleic acid, and detecting presence of RNA
PT target.
XX
XX Claim 95; SEQ ID NO 2087; 1266pp; English.
PS
XX This invention describes a novel composition comprising an enzyme which
CC contains a heterologous functional domain that provides altered
CC functionality in a nucleic acid cleavage assay. The enzyme comprises a 5'
CC nuclease, preferably a thermostable 5' nuclease, or a polymerase which is
CC altered in sequence related to a naturally occurring sequence of a
CC polymerase such that it exhibits reduced DNA synthetic activity from that
CC of the naturally occurring polymerase. Preferably the polymerase is a
CC thermostable polymerase from a Thermus species such as T. aquaticus, T.
CC flavus, T. thermophilus, T. filiformis or T. scotoductus. The enzyme
CC comprises a heterologous functional domain, an amino acid sequence that
CC provides an improved substrate binding activity in the nucleic acid
CC cleavage assay and an amino acid sequence that provides improved
CC background specificity in the nucleic acid cleavage assay. The invasive
CC cleavage structure comprises a RNA target nucleic acid (a cytochrome
CC P450, or cytokine RNA). Cleavage of the invasive cleavage structure
CC generates a non-target cleavage product, which is then detected by
CC detecting fluorescence, mass or fluorescence energy transfer or by
CC detecting radioactivity luminescence, phosphorescence, fluorescence
CC polarisation or charge. The enzyme is useful for cleaving a nucleic acid
CC which involves exposing a sample (a cell lysate) comprising substrate
CC nucleic acid to the enzyme which produces at least one detectable
CC cleavage product. The enzyme is employed for detecting target DNAs and
CC RNAs comprising wild-type and mutant alleles of genes including genes
CC from humans, other animal or plants that are or may be associated with
CC disease or other conditions. In addition, the enzymes may be useful for
CC detecting and identifying strains of microorganisms including bacteria,
CC fungi, protozoa, ciliates and viruses, preferably detecting and
CC identifying viruses having RNA genomes, such as hepatitis C and human
CC immunodeficiency virus.

XX
XX Claim 96; SEQ ID NO 624; 1266pp; English.

This invention describes a novel composition comprising an enzyme which contains a heterologous functional domain that provides altered functionality in a nucleic acid cleavage assay. The enzyme comprises a 5' nuclease, preferably a thermostable 5' nuclease, or a polymerase which is altered in sequence related to a naturally occurring sequence of a polymerase such that it exhibits reduced DNA synthetic activity from that of the naturally occurring polymerase. Preferably the polymerase is a thermostable polymerase from a thermus species such as T. aquaticus, T. flavus, T. thermophilus, T. filiformis or T. scotoductus. The enzyme comprises a heterologous functional domain, an amino acid sequence that provides an improved substrate binding activity in the nucleic acid cleavage assay and an amino acid sequence that provides improved background specificity in the nucleic acid cleavage assay. The invasive cleavage structure comprises a RNA target nucleic acid (a cytochrome P450, or cytokine RNA). Cleavage of the invasive cleavage structure generates a non-target cleavage product, which is then detected by detecting fluorescence, mass or fluorescence energy transfer or by detecting radioactivity luminescence, phosphorescence, fluorescence polarisation or charge. The enzyme is useful for cleaving a nucleic acid which involves exposing a sample (a cell lysate) comprising substrate nucleic acid to the enzyme which produces at least one detectable cleavage product. The enzyme is employed for detecting target DNAs and RNAs comprising wild-type and mutant alleles of genes including genes from humans, other animal or plants that are or may be associated with disease or other conditions. In addition, the enzymes may be useful for detecting and identifying strains of microorganisms including bacteria, fungi, protozoa, ciliates and viruses, preferably detecting and

CC identifying viruses having RNA genomes, such as hepatitis C and human
CC immunodeficiency virus.

XX Inhibiting growth of a tumor cell, involves introducing to the cell, an
PT antioncogene protein or nucleic acid encoding the proteins, to inhibit
PT growth of the tumor cell.
XX
XX Disclosure; Page 7; 28pp; English.

The invention relates to inhibiting growth of a tumour cell, involving introducing to the cell, p19(ARF) (or its mimetics), and p53 to inhibit growth of the tumour cell. p19(ARF) acts as a suppressor of oncogenic transformation by binding to the MDM2 (not defined) oncoprotein and blocking its ability to target associated proteins (such as Rb and p53) for proteosomal degradation. Also included is a pharmaceutical composition comprising p19(ARF), or comprising a nucleic acid encoding p19(ARF). The method is useful for inhibiting the growth of a tumour cell, and the treatment of cancer. A mutant of MDM2 was created (lacking amino acids 156-221) which was used to investigate the binding of p19(ARF) to MDM2. The present sequence is a PCR primer used to create a nucleic acid encoding the MDM2 mutant protein

XX CC graft versus host disease, hypersensitivity diseases, infectious diseases,
XX CC and neoplastic diseases. Autoimmune diseases include Addison's disease,
XX CC atrophic gastritis. Degenerative nervous system diseases include multiple
XX CC sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
XX CC I hypersensitivities such as contact with allergens that lead to
XX CC allergies, Type II hypersensitivities such as those present in
XX CC Goodpasture's syndrome and Type IV hypersensitivities such as those
XX CC manifested in leprosy. Infectious diseases include viral infections
XX CC caused by viruses such as HIV, fungal infections such as those caused by
XX CC the yeast genus Candida, parasitic infections such as those caused by
XX CC schistosomes, filaria and bacterial infections such as those caused by
XX CC Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
XX CC such as leukaemias, lymphomas and cancers such as cancer of the brain,
XX CC breast. The present sequence represents a Vbeta microsatellite primer.

XX CC The invention relates to an antisense compound targeted to a nucleic acid
XX CC molecule encoding human NF-kappa-B p65 sub-unit. The antisense compound
XX CC may be used as a prophylaxis to prevent or delay infection, inflammation or
XX CC tumour formation; used for the treatment of disease or disorder
XX CC associated with the expression of NF-kappa-B p65 sub-unit; for research
XX CC and diagnostics; or as reagents and kits. Antisense compounds may be used
XX CC as research reagents and diagnostics, to elucidate the function of
XX CC particular genes, to distinguish between functions of various members of
XX CC biological pathway, and in treatment regimes of cells, tissues, and
XX CC animals. The present sequence represents a human NF-kappa-B p65 sub-unit
XX CC antisense oligonucleotide.

XX PT Predicting responsiveness of a subject with breast cell proliferative
XX PT disorder, useful for treating or differentiating breast cell
XX PT proliferative disorders comprises analyzing methylation pattern of a
XX PT genomic DNA from the subject.
XX PS Disclosure; SEQ ID NO 1656; 104pp; English.
XX XX
XX CC The invention relates to a novel method for predicting the responsiveness
XX CC of a subject with a cell proliferative disorder of the breast tissues to
XX CC a therapy comprising analysing the methylation pattern of a target
XX CC nucleic acid by contacting at least one of the target nucleic acids in a
XX CC biological sample obtained from the subject prior to or during treatment.
XX CC The method of the invention has cytostatic activity, and may have a use
XX CC in gene therapy. The set of oligonucleotides comprising at least two of
XX CC the oligomers are useful for detecting the cytosine methylation state
XX CC and/or single nucleotide polymorphisms (SNPs) within the sequences. The
XX CC methods, nucleic acid, oligonucleotide, and kit are useful for the
XX CC treatment, characterisation, classification and/or differentiation, of
XX CC breast cell proliferative disorders. The method is also useful for
XX CC predicting the responsiveness of a subject with a cell proliferative
XX CC disorder of the breast tissues to a therapy. The present sequence is used
XX CC in the exemplification of the invention.

PT Identifying normal cell methylation range in locus of interest by
PT modifying nucleic acids by cytosine-conversion, identifying sample with
PT methylated CpG sites, producing methylation map, quantifying methylation
XX ratio, establishing range.
XX Example 1; SEQ ID NO 37; 80pp; English.
XX This invention relates to a novel method of identifying a normal cell
CC methylation range in a locus of interest. The method involves providing
CC separately nucleic acids from samples and modifying the nucleic acids by
CC cytosine-conversion, identifying samples with high to moderately
CC methylated CpG sites, generating a methylation map, performing
CC amplification of specific CpG sites, quantifying the unmethylated to
CC methylated ratio and establishing a correlation between methylation and
CC mRNA expression levels. The method is useful for identifying a normal
CC cell methylation range, in order to allow for the detection of aberrant
CC methylation, in a locus of interest in a nucleic acid, particularly at a
CC CpG island. The invention is useful for detecting aberrant methylation in
CC a locus of interest in a nucleic acid, particularly at a CpG island, of a
CC subject and may be useful for diagnosis or prognosis of a disease in a
CC subject. The disease is cancer chosen from breast cancer, prostate
CC cancer, ovarian cancer, hepatocellular cancer and primitive
CC neuroectodermal cancer. The invented method is preferably useful for
CC screening samples for aberrant methylation of the CBFA2T3 gene and
CC enables high sensitive and accurate quantification of CpG methylation at
CC any given genetics locus. The present sequence is that of a PCR primer
CC which was used for amplification of a region of the human CBFA2T3 gene in
CC the exemplification of the invention.

XX

Primer set for identifying killer-cell immunoglobulin-like receptor KIR
allele or all of presently known KIR alleles, comprises primer pairs
capable of producing amplicon having specific length from nucleic acid
encoding KIR.

XX Example 1; Page 23; 32pp; English.
XX The invention relates to a novel primer set for identifying a killer-cell
CC immunoglobulin-like receptor (KIR) allele or identifying all of the
CC presently known KIR alleles, comprising a first primer pair that
CC comprises a first primer and second primer, or several primer pairs
CC capable of identifying all presently known KIR alleles, where the primer
CC pairs are capable of producing an amplicon that is less than or 1000
CC bases in length from a nucleic acid that encodes a KIR. The primer set is
CC useful for detecting a KIR allele, in carrying out reverse transcriptase
CC (RT)-PCR of KIR mRNA for expression analysis, and for identifying single
CC KIR allele. The primer set is useful for defining or identifying KIR
CC haplotypes, genotypes and polymorphic variations in an individual or in
CC different populations, for identifying KIR compatible and incompatible
CC stem cell transplant donor-recipient pairs and for studying if KIR
CC mismatching between donor and recipient correlates with KIR epitope
CC mismatch predicted by human leukocyte antigen (HLA). The primer set
CC provides high resolution or allele level genotyping that primarily target
CC polymorphism in the extracellular domains of the KIR genes. The sequences
CC shown in (AE12251-AE12290) represent the primer set of the invention.
